MEDICINE AND ALLIED 2nd FEB NIGHT 2020

(Errors and omissions excepted)

Cram Statements

- Hypersensitivity of diphtheria----->type 3
 - Arthus reactions (type III hypersensitivity reactions) are rarely reported after vaccination and can occur after tetanus toxoid-containing or diphtheria toxoid-containing vaccines. ... Arthus reactions are characterized by severe pain, swelling, induration, edema, hemorrhage, and occasionally by necrosis.
 - Slow breathing reduce ----->dead space
 - Slow and deep breathing is an integral part of Pranayama and it reduces dead space ventilation and renews air throughout the lung
 - Remnant of Gubernaculum testis -----scrotal ligament
 - The scrotal ligament is actually the remnant of gubernaculum in a fetus. This ligament secures the testis to the most inferior portion of the scrotum, tethering it in place and limiting the degree to which the testis can move within the scrotum.
 - A man working in a well-ventilated room started sweating profusely. O/E BP was high, pulse tachycardiac at a room temperature of 26C. The most likely cause is? ----->exercise
 - Scar mark complication ----->incisional hernia
 - Child fall unable to pass urine injury to ----->urethra
 - Daily requirement of protein-----1g per kg
 - Chailosis occurs in deficiency of ----->riboflavin
 - Bleeding after circumcision, apt, aptt raised ----->factor 8 deficiency
 - Hyper excitability of neuron ----->calcium deficiency
 - Most abundant in gray matter ----- protoplasmic astrocytes
 - A young patient with GFR less than 50% and decreased urine output an increase in the levels of which of the following will be alarming----->cretinine/ K+
 - Thymus ----->extend from inferior border of thyroid to c4
 - Parathroid blood supply ----->Inferior and superior thyroid artery absolutely right

- Slowly depolarizing pre-potential? ----->SA node
- Investigation of choice in ankylosing spondylitis ----->MRI
- Graph of drug given orally having steep curve ----->increased potency
- Potency ----->small dose greater effect
- Left axis deviation on ECG in ----->Rt ventricular damage
- crisp and clear information to patient ----->according to his needs
- At myloid stage leukocytes are differentiated on the basis of? ----->granular staining
- Best way to MEASURE GFR ----->INULIN
- 41 % of HCT means -----> Formed cells of RBCs
- anterior interventricular and circumflex branches of ----->Left coronary artery
- Best way to add vitamins to diet add ----->vegetables
- Least % blood cells ----->basophils
- Ace inhibitor ----->captopril
- In rigor mortis muscle rigidity is due to ----->decrease ATP
- Carcinogen asbestos ----->mesothelioma
- Management of Subarachnoid hemorrhage? ----->nimodipine
- Subdural hematoma ----->superior cerebral vein
- Ace inhibitor ----->block angiotensin conversation
- Intermediate filament ----->cytokeratin
- Book picked up some books in hand after adding one more book to his hand the boy's hand suddenly dropped all the books this is because of ----->Inverse stretch reflex
- 2 secondary ossification center ----->mandible
- Total parenteral nutrition side effect ----->Hyperglycemia
- Boy with sickle cell disease deeply jaundiced hb 5.6 plt 260000 tlc 10000 ----->sequestration crises
- B12 is absorbed in ----->ileum (def. in resection)
- Obesity, Inc ACTH -----> Cushing disease
- Major stress hormone ----->ACTH
- stab wounds post triangle ----->muscle injured trapezius
- Muscle inferiorly related to hip joint ----->obturator externus

- **Vibration loss and Pt standing normally with eyes open but fall to side when eye close lesion is ----->dorsal column**
- **Colour Differentiation due to Red and Green ----- Protonopia**
- **30 yr old sore throat and fever, e week latent with history of travel. Generalized lymphadenopathy polyclonal hyperplasia?----->HIV seroconversion**
- **Epinephrine ----->dec. cutaneous blood flow**
- **Squamous cell carcinoma scenario -----> larynx**
- **Number of vertebrae -----33**
- **Corpus luteum produces which hormone that maintains the pregnancy in first trimester ----->progesterone**
- **3rd heart sound in normal young adult ----->rapid ventricle filling**
- **virulence of organism is due to ----->toxins**
- **Hiv +ve pt . Diagnosis. ? ----->western blot**
- **Alveoli and lobule development in breast by ----->progesterone**
- **Blood culture ----->for infective endocarditis diagnostics**
- **AMA test is for----->PBC**
- **Not given orally because of highly first pass effect, inactivation by liver ----->Benzylpenicillin**
- **cGmp as a second messenger in :-----> ANP**
- **aflatoxin cause -----> liver hcc**
- **in CLD ----->edema due to Dec. oncotic pressure**
- **osmolality is decreased due ----->to vasopressin**
- **Farmer's Lung is due to -----Grain dust.**
- **Farmer's lung with Granuloma, rhino sinusitis with medial erosion, calcification of lung----->Aspergillosis**
- **Increase extracellular volume decrease intracellular net effect of ----->3% saline**
- **Negative water clearance in ----->SIADH**
- **Short term action of angiotensin 2 -----> vasoconstriction**
- **Old man RTA , chances of -----fat embolism**
- **low amplitude QRS complex ----->OLD MI**

- Most aggressive tumor ----->melanoma
- Radiosensitive most ----->Lymphoma/lymph nodes
- Ecg of Saw tooth seen in ----->flutter
- Empty cells on biopsy ----->fat cell
- I/V urography of 8 years old baby shows normal rt kidney but absence of shadow on left side. Instead there is small shadow just above the bladder on left side condition is----->pelvic kidney
- What is the least important thing during first interaction with patient: ----->showing your authority
- Umbilical veins -----high saturation of o₂
- Diagnostic criteria of cancer ----->Invasion
- Corpus luteum secreted ----->Progesterone, estrogen and inhibin. (EPI)
- Randomized clinical trial (poor recall look for better options, probable answer explanation)--- -----Randomized controlled trial: (RCT) A study in which people are allocated at random (by chance alone) to receive one of several clinical interventions. One of these interventions is the standard of comparison or control. The control may be a standard practice, a placebo ("sugar pill"), or no intervention at all.
- cancer differentiation is by ----->Grading
For staging is by ----->extent of invasion
- In exercise, the venous blood returns to heart by ----->Muscle pump in calves/exercise
- Aortic regurgitation murmur ----->> early diastolic
murmur of aortic regurgitation is a soft, high-pitched, early diastolic decrescendo murmur heard best at the 3rd intercostal space on the left (Erb's point) on end expiration, with the patient sitting up and leaning forward. ... This murmur is termed the Austin-Flint murmur.
- A patient died on autopsy on vertical dissection lateral to sternum which artery will be seen just behind the sternum ---->ascending aorta (if not then internal thorasic)
- In pneumothorax -----> lung collapse inward and chest wall spring outward
- Conversation of one normal epithelium into other normal epithelium ----->Metaplasia
- what is seen in dysplasia ----->pleomorphism
- 35 years old female presents with 6 month Hx of fingers turning pale in cold (Raynaud's phenomenon) also having mild dyspnea with no wheeze, B/L pleural effusion, creatinine was

high, urea also raised, ANA positive. What is the diagnosis? ----->Progressive Systemic Scleroderma

- P50 value in right shift ----->35
- Insulin cause ----->glucose entry into cell
- Digoxin toxicity ----->increased by hypokalemia
- A study is conducted to see rates on antibiotics of same effect produced by different pharmaceutical company and rate of different drugs are 1.5 1.8 2.0 2.5 3.0 9.0. Which measure of central tendency will be used: ----->Weighted mean
- Pt is brought in state of shock bp unrecordable pulse thready .the negative feedback from aortic and carotid to rise? ----->Pco2 in blood
- Thrombocytopenia after viral infection. the finding on bone marrow biopsy inc megakaryocytes ----->ITP
- lateral rotation of shoulder joint----->Teres minor
- UMN lesion ----->clasp knife rigidity
- Patient presented in emergency deeply comatosed not responding to naloxone----->Phenobarbital
- Rash on palm sole ----->secondary syphilis
- Mumps ----->parotid swelling and orchitis
- an HIV patient is at risk of developing ----->cervical CA
- Saw tooth ----->atrial flutter
- Prominent u wave ----->hypokalemia
- Steep curve in dose response shows? ----->More drug required for effect
- CML ----->9 22
- BCG hypertensivity type ----->4
- smelling stools investigation -----> stool culture and sensitivity
- IE diagnosis ----->blood culture
- In diabetic patient to increase git motility ----->metoclopramide
- short term action of angiotensin 2-----> vasoconstriction
- Cremasteric reflex by ----->genitofemoral nerve

- A neonate comes to Pediatrician easy bruising and jaundice mother taking antibiotics in pregnancy which antibiotics will be deficient in-----VIT k
- A man working in a well-ventilated room started sweating profusely. O/E BP was high, pulse tachycardia at a room temperature of 26C. The most likely cause is? ----->exercise
- vomiting center ----->Medulla
- veins of brain are Direct tributaries of? ----->dura
- Corticosteroids long term----->Use causes osteoporosis and bone fractures
- Traveller diarrhea's not responding to antidiarrheal agent.....Norfloxacin
- Hco3 absorption-----PCT plus CT
- Arterial blood in ----->heparinized syringe
- Itching due to stimulation of -----c fibres
- Responsible for chemotaxis -----> C5a
- After ovulation, primordial follicle ruptures, bleeds and becomes----->Corpus hemorrhagicus
- Regulating rate and pattern of respiration ----->Pneumotaxic centre
- During strenuous exercise ----->dec TPR
- Temperature 101 with lymphadenopathy scenario ----->hiv seroconversion
- Captopril ----->Inhibits angiotensin 2
- Hairy leukoplakia in HIV ----->EBV
- Pacinian receptors are ----->rapidly adapting
- Cutting finger wd sharp knife Immediately response----->vasoconstriction
- Theta waves in eeg----->stage 1 of sleep
- Vein which travel with post inter ventricular artery----->middle cardiac vein
- Core body temp to Skin --Depends on core temp gradient
- Both type of ossification occur in ----->Mandible
- Potent stimulant of erythropoietin ----->Hypoxia
- Inherited cause of thrombosis ----->factor 5
- Ileal resection ----->vit should be given is b12
- Urachal fistula-----Meckel diverticulum
- Post triangle neck ----->Base by middle 3rd clavicle
- Umbilical veins ----->high saturation of o2

- Patient with staph aureus infection antibiotics given 2 week later presented with cough fever 3cm mass in the right lung with air fluid level what is the cause.----- Lung abscess.
- loss of vibration sense in lower limbs MCV 105 what is the cause.-----Vit B12 defecency anemia.
- intrinsic factor are produced by-----Parietal cells.
- Acute intravascular hemolysis characteristic findings-----Dec haptoglobin
- Hematocrite of 41 means-----41% of the formed elements in the blood are RBC.
- Calcium and phosphate are regulated by ----->PTH
- Prostaglandin E2 F2 D2 effect ----->vasodilation
- Lymphocytes from blood enter lymph node by-----afferent sub capsularis sinus
- farm worker presented with ascitic. Ascitic fluid was hemorrhagic and contained malignant cell. Liver biopsy showed Angiosarcoma. The most probable cause is----->arsenic
- type of pneumoconiosis in sand blaster and crusher is ----->silicosis
- ER extradural hematoma is diagnosed which one of the following artery is damaged --- -----Anterior branch of middle meningeal Artery.
- Injury to the temple which artery is damaged-----Middle meningeal Artery.
- Diagnosed as a case of subdural hematoma what is the cause-----Leakage of superior cerebral vein.
- HLA B27 is associated with -----Ankylosing spondylitis.
- associated with HLA B27-----Juvenile arthritis.
- loss of accommodation reflex CT brain will show lesion in -----Mid brain.
- Dorsomedial nucleus of thalamus-----Anxiety.
- Lady has difficulty in coming downstairs and tilt head to left with Eye Upward while moving down stairs lesion is at----->Right superior oblique

- tumor suppressor gene-----P53
- sternohyoid muscle is supplied by ----->ansa cervicalis
- Bifurcation of common carotid artery----->Upper border of thyroid cartilage.
- Pulsation of common carotid artery can be felt----->anterior border of the sternocleidomastoid muscle at the level of the superior border of the thyroid cartilage
- Posterior triangle Base is formed by ----->posterior border of the sternocleidomastoideus (else middle of the clavicle)
- Phrenic nerve passes Superficial to ----->scalenus anterior
- Axillary nerve is most commonly damaged ----->Dislocation of shoulder joint.
- damage to the neck of the humerus artery damage ----->Post. Circumflex humeral Artery.
- A patient presented with fractured 1st rib radial pulse is weak which artery is damaged-----Subclavian.
- Pampaniform plexus is present in-----Inguinal canal.
- Left sinking of pelvis damage to which structure----->R gluteus medius.
- biliary colic which is given for pain relief-----Hyocine bromide
- Pain killer for acute pancreatitis-----Pethidine/morphine
- Drug used with MAOI cause fatal excitation-----morphine/fentanyl
- Blockage of sup mesenteric artery gut ----->wet gangrene
- Hyper excitability of nerve cause -----> decreased Ca⁺
- primary billiary sclerosis which test to be done ----->AMA
- on warfarin for 2 days he developed ecchymosis & discoloration of fingers ----->protein C deficiency.
- Heparin binds to ----->antithrombin 3
- Herniated disc with decrease sensation compress-----> spinal nerve and post root
- Fine miniature movements by artist-----> cortico spinal tract
- Free nerve endings has fibers ----->type c fibers

- MG scenario antibodies are -----> anti acetylcholine receptor antibodies
- Huntington's syndrome genetic variant ----->autosomal dominant
- Increase BP increase intracranial pressure decrease heart rate-----> Cushing triad
- transfer genetic material----->DNA
- responsible for red green color blindness -----cones
- 5th month pregnant lady with thyrotoxicosis drug of choice -----
>Methimazole
- ANS auto regulation center ----->hypothalamus
- Most abundant glial cells in gray matter? ----->protoplasmic astrocytes
- Lead poisoning leads to ----->peripheral neuronal demyelination
- Pt with Webbed neck has genotype -----> 45xo
- Turner syndrome has genotype ----->45xo
- Myelination of nerve fiber of CNS in intrauterine life begins at? ----->4th month
- Right surface of heart formed by -----> right ventricle
- Mucinous secretion is by ----->sublingual glands
- Lower lip drainage lymphatic drainage is ----->submental nodes
- Type of narcosis in pancreatitis ----->Fat necrosis
- Alveoli and lobule development in breast by ----->progesterone
- Secretory phase of menstrual cycle is under effect of ----->progesterone
- Corpus luteum produces hormones ----->estrogen, inhibin, progesteron
- ECG findings in Hypokalemia ----->prominent U wave
- Prophylaxis against tetnus ----->Tetnus toxoid
- onset of puberty is due to ----->PULSATILE INC GnRH
- blood supply to post 1/3rd of interventricular septum ----->RCA
- intrinsic factors are released by which cells ----->parietal cells
- If pt asked not to tell about his disease then ----->Tell nothing to relatives
- Common side effect of antihyperlipidemic drugs is ----->GIT disturbances
- Shallow breathing effect on dead space ----->doesn't change Dead space

- induce saliva production?----->VIP
- Major finding in glycogen storage disease is----->Hepatomegaly and hypoglycemia
- Parasympathetic ----->decrease HR
- Phenochromocytoma has feature ----->hypertension
- hormone inhibits gastric emptying ----->CCK
- Labyrinthine artery branch of ----->basilar or ACA
- Neurotoxin that selectively cleaves the synaptic protein SNAP-25 ----->botulinum a and b
- At heart rate of 75 ventricular systole is of 0.3 second. At HR of 225, systole timings? -- ----->0.1sec
- If the heart rate is doubled during exercise, then the cardiac cycle will complete in ---- ----->0.4s
- injury to anterior tibial nerve but he is stillable to do flexion on the knee because of? -- ----->short head of biceps femoris
- Eversion injury which ligament is damaged? ----->Deltoid ligament
- Bladder ca cause -----> aromatic amines
- A patient with gastric and duadenal ulcer what is the most common cause. -----H pylori
- A patient with H pylori is most likely to develop which CA.-----Gastric CA
- history of smoking presented with painless hematuria diagnosed as CA bladder what is the cause.-----Smoking.
- mass in the pelvis and CA ovary tumor marker was asked.-----CA125
- Acetazolamide MOA----->H ion and k Na excretion.
- Hormone which always acts through CAMP is -----TSH
- A patient with injury to the 7 cervical vertebra and hemi section of the cord findings will be---- -----Contralateral loss of pain and temp.
- 26 years old tracheostomy site-----C2/c3
- The substance use to measure total body water is? ----->Antipyrene
- Oxygen consumption by brain-----3 4ml/100gm/min

MEDICINE AND ALLIED 25TH FEB EVENING 2020

(Errors and omissions excepted)

Cram Statements

- True about mammary gland-----> Has 15 to 20 lactiferous ducts
- Appendicular artery is branch of -----> iliocolic
- Thiazide diuretic causes-----> hypokalemia
- Serotonin is secreted by -----> carcinoid tumor
- Better hearing in noisy environment -----> otosclerosis
- Clavicle fracture, Can't rotate Arm laterally -----> Teres Minor
- Loss of abduction at arm nerves involve -----axillary and suprascapular nerve
- Cervical carcinoma lymphatic drainage -----internal iliac lymph node
- Defecation reflex is -----> rectoanal
- 20 year girl presented with proximal tibial swelling on Histology both epiphases and diaphasis were involved giant cells seen diagnosis -----giant cell tumor
- in middle trimester pregnancy hematopoiesis occurs -----liver of fetus
- structured lies superficial to sternocleidomastoid -----external jugular vein
- which muscle extends from femur having role in stability of knee joint -----vastus lateralis
- Bilateral ptosis and chewing problem . diagnosis-----> myasthenia gravis
- proximal convoluted tubules epithelium -----> simple tall cuboidal epithelium, with a brush border
- right kidney related to -----> second part of duodenum
- a person from supine to standing position compensation -----> Increase Heart rate
- A 35 years old tall male has hypertension for the first time and he dies. His autopsy shows a ruptured aneurysm, there is deficiency of media at the site of rupture. what kind of aneurysm it is.-----> aortic dissecting
- *near the base/ oval window -----> high-frequency or high-pitch sound heard*
- Enzyme raised in biliary obstruction -----> alkaline phosphate
- Primary biliary cirrhosis investigation of choice-----> anti mitochondrial antibodies
- Chief source of vitamin K -----> green leafy vegetables

- ✓ Join Fcps-1 online preparation classes (Live Classes)

- Treatment of warfarin overdose treatment -----> vitamin K
- Selective beta blocker -----> Atenolol
- Cytomegalovirus infection can be prevented by -----> screening
- Vertebral artery give rise to -----> basilar artery
- anterior inferior cerebellar artery is branch of -----> basilar artery
- Child with recurrent infections which physiological antibody is missing-----> IgA
- Hepatocellular carcinoma marker -----> AFP
- Bone with no muscles are attached -----> talus
- Clavicle break at which part -----> middle 2/3 and lateral 1/3
- Brachial cleft cyst within lateral neck anterior to sternocleidomastoid muscle -----> 2nd cleft
- Location of pudendal nerve block -----> ischial spine
- Doctor divide people on age basis and then randomly allocates them in different groups -----
---Stratified random sampling
- Heterophile antibody test is for -----infectious mononucleosis
- Most radiosensitive tumor -----> lymph nodes
- Conus medullaris site -----> lower end of L1
- Burkitt lymphoma occurs due to -----> c-myc translocation
- Blood supply of Middle third of esophagus-----> Descending thoracic aorta
- melanoma normal reaches orbital cavity through -----> Emissary vein
- PAS positive is found in -----> whipple disease
- Thirst is activated by -----> angiotensin II
- chief area of anatomic system reflex -----> hypothalamus
- Drug of choice in meningitis -----> ceftriaxone
- Total peripheral resistance index -----> mean arterial pressure
- Chief site of prostate cancer -----> posterior lobe
- Prostate cancer metastasis by -----> vertebral plexus
- Anterior cruciate ligament while knee joint flexed prevents -----> Ant. dislocation of tibia on femur
- Heart blood flow is directly proportional to -----> myocardial oxygen demand
- Newly born child having ossification center -----> distal end of femur
- Child has fever and stridor best test -----> blood culture

- Prohormones are stored in secretory granules or vesicles and transported along the neuronal axon from the cell body to the nerve endings -----> neurohypophysis
- Koplik spots are character -----> measles
- Ulnar Nerve supplies -----> medial 2 lumbricals
- Drug receptor interaction-----> Bradycardia by labetalol
- exogenous agent which cause alteration of protoncogene -----> virus
- in infants defecation after feed = gastrocolic reflex
- Duchenne muscular dystrophy is inherited in an -----> X-linked recessive pattern
- conduction aphasia is thought to be caused by a lesion in -----> arcuate fasciculus
- Person had dec motivation or emotions and talks excessive but doesnt make sense,lesion -----> Wernicke Temporal lobe
- glucocorticoids cause decrease in -----> Peripheral uptake of glucose
- Lady has menstrual cycle of 29 days ovulation occur at which day -----> 14 day
- Delayed act of insulin -----> protein synthesis
- Hyperkalemia caused by -----> exercise
- Ventral tegmentum -----> source of dopamine along with substantia nigra
- Which is true regarding bronchopulmonary segment-----Supplied by tertiary bronchiole
- Phagocytosis is by -----> neutrophils (macrophages was not an option)
- Hyperplasia of lymphoid is by -----Leshmaniasis
- 3rd heart sound shows -----> rushing of blood rapidly in ventricle filling
- Cause of edema in known case of IHD and hypertension-----Increase hydrostatic
- Stimulus of gastric acid secretion by -----> proteins/amino acids
- Breast implants after 2 yrs leakage of breast material breast feels heavy signs of acute inflammation cells present-----> giant cells
- Hydroxyindoleacetic is present in urine it is present in which disorder -----> carcinoid tumor
- type of necrosis in pancreatitis -----> fat necrosis
- Abdominal angina occurs due to -----> Superior mesenteric artery
- Most important t cells are -----> helper t cells
- Example of DNA virus -----> adenovirus
- Scenario of typhoid the investigation of choice will be-----> widal test
- Lymphatic drainage of anterior two third of tongue -----> submandibular lymph node

- ✓ Join Fcps-1 online preparation classes (Live Classes)

- Type of hemolysis in G6PD is -----> acute self limiting hemolysis
- Dormant phase of Malaria is -----> hypnozoites
- Small short acting Beta blocker -----> esmolol
- in a subclavian artery block at the outer border of first rib vessels help in maintaining the circulation to upper limb except?-----> Superior thoracic artery
- Tabes dorsalis will result in -----> atonic bladder
- Histopathology report showing pleomorphism, rete ridges, loss of polarity and increased nuclear to cytoplasmic ratio what is the dx?-----> Verrucous CA
- Stroke patient loss of motivation and depression lesion involve. -----> frontal lobe
- 64 data x collected for sme clinical trial based on presence r absence of vomiting type of data - -----Nominal data
- Sperm become partially motile in -----> epididymis
- Genotype of klinefelter syndrome -----> Genotype 47 xxy
- Gynecomastia, undeveloped testes, xxy? -----> klinefelter
- Autoregulation of renal blood flow at what MEAN -----> 80 – 120 mmhg
- active buffer in DKA patient -----> bicarbonate
- penile erectile tissue receptors -----> alpha adrenergic receptors
- Cervical cancer is caused by -----> HPV
- Regarding cimetidine-----> inhibit hepatic enzyme
- What will increase in graves disease -----> t3
- Hydrocephalus results due to -----> Stenosis of aqueduct of Sylvia
- A boy had mucous and bloody stools what is the most likely cause -----> hamartomatous polyp
- Fracture of first rib will result in damage to -----> subclavian artery
- Difference between primary contraction and secondary wound healing -----> wound contraction
- abdomen moves during respiration after roadside accident the accessory respiratory muscle is ----->external oblique
- Examination of pregnant lady showed inverted ischial spines and narrow pubic arch. best term for this type of pelvis-----> android pelvis

- Scenario of blurred vision tall height and importance most probable diagnosis -----> acromegaly prolactinoma
- Difference between cretinism and dwarfism -----> mental retardation
- intestinal motility is increased by -----> gastrin (if not then use cck)
- trypsinogen is activated by -----> enterokinase
- pepsinogen is activated by -----> HCL
- investigation of choice for cystic fibrosis -----> sweat chloride test
- Subdural hemorrhage occurs due to -----> Superior cerebral vein
- TSH acts by -----> cyclic amp
- Tumor suppressor gene -----> p53
- P53 -----> increase cell survival
- Oxygen from alveoli to blood is by -----> passive diffusion
- transmitted by food and water -----> vibrio cholerae
- Glycocalyx -----> type of carbohydrate coat
- Grading shows -----> differentiation of cell
- Cushing syndrome may occur due to -----> small Cell CA
- lipoprotein that has highest cholesterol content -----> LDL
- Intervertebral joint is type of joint -----> symphysis
- Barret's esophagus is example of -----> metaplasia
- pain of peptic ulcer is carried by -----> greater splanchnic nerves
- Organism responsible for spore forming -----> clostridia
- organism for bladder cancer -----> schistosoma haematobium
- brachiocephalic is formed by union of -----> internal jugular vein and subclavian vein
- stereognosis -----> ability to perceive the form of solid objects by touch
- Crossed to fetus by placenta -----> Thyroxin
- Brown squad syndrome half vertebral damage result in -----> contralateral pain and temperature lost
- Nociceptors are responsible for -----> withdrawal reflex
- Scenario of parkinsonism damage in area -----> substantia nigra
- Neurotransmitter at an atomic ganglia -----> a c h
- Rubro spinal tract responsible for -----> tone in flexor muscles

- Invasion is character of thyroid ca -----> follicular carcinoma
- Left posterior aortic sinus gives rise to the artery -----> left coronary artery
- Thyroglobulin is produced by -----> follicular cells
- Lymphatic supply of fundus of stomach -----> celiac node
- Portal triad is in -----> hepatodudunal ligament of lesser omentum
- joins anterior abdominal wall to liver -----> falciform ligament
- Thyroid is originated from -----> foramen cecum
- Exaggerated tendon jerks is character of -----> upper motor neuron lesion
- Scenario of alcoholic patient who is also smoker increased -----> risk of sq cell carcinoma
- Lipoprotein synthesized in liver are poured first in which structure-----> space of diss
- during meiosis abnormality may occur if one of the cell gets and extra chromosome instead of haploid numbers this condition is -----> trisomy
- chorea caused due to lesion of -----> Corpus striatum
- Patient with hypoxia, PO2 60mmhg, Hb 15, no history of poisoning or blood loss. Diagnosis ----> hypoxic hypoxia
- decrease GF for occurs due to -----> decrease arterial blood pressure
- Total body water is calculated by -----> antipyrine
- Hand disinfectant is -----> alcoholic chlorhexidine
- Fracture of femur result in -----> fat embolism
- Secreted by endothelium -----> factor 8
- Young female developed acute renal failure after postpartum hemorrhage.which part of kidney is most likely damaged -----> PCT
- Middle rectal artery is branch of -----> internal iliac
- Grade 4 encephalopathy occurs due to -----> Paracetamol poisoning
- smooth muscles have inner circular -----> outer longitudinal fibers
- Right ovarian vein drains into -----> inferior Vena cava
- Oxidases are present in -----> peroxisomes
- girl in from poor family frontal bossing ,leg bowing, pectus excavatum-----Vitamin D deficiency
- Lambert Eaton syndrome is characteristic antibodies -----> antibodies against calcium channels
- maximum cross sectional area is of -----> capillaries

- Axon hillock -----> arise b/w cell body and axon
- Pre op anti emetic -----> odansetron
- which hormone will be in normal level during pregnancy -----> GH
- Blood pressure control is example of -----> negative feedback
- After thyroidectomy the complication maybe -----> hypocalcemic tetany
- bronchopulmonary segments are drained by -----> tertiary bronchus
- anterior Tibial nerve damaged, muscle spared -----> short head of biceps femoris
- RBC cast in urine due to damage to -----> glomeruli
- Diagnostic test for amoebic abscess -----> serology
- Female having severe hemorrhage and her blood group is AB Positive. Which of the following blood group FFPs can be transfused -----> AB NEGATIVE
- at the end of exercise person will have -----> increased glucagon and decrease insulin
- Bell's palsy is a feature of -----> facial nerve
- most common heart abnormality -----> VSD
- hypothalamus set point temperature higher then normal body temperature what will decrease? -----> sweating
- strongest layer of gut is -----> submucosa
- Triceps has nerves supply -----> radial nerve
- Senario having histopathology of epithelioid cell diagnosis with granuloma diagnosis is -----> Tuberculosis
- Which of the following types of drugs will have maximum oral bioavailability? -----> Largely hydrophobic, yet soluble in aqueous solutions.
- HIV confirmatory test -----> western bolt
- Regarding pulmonary varix -----> opens into left atrium
- first line of drug of generalized tonic clonic seizures -----> topiramate (other options were not relevant)
- Unsaturated fatty acids are present in -----> soybean
- Diazepam causes profound hypotension when administered with -----> fentanyl
- Nasopharyngeal carcinoma -----> EBV
- Fungus that invade rhiosinusitis or cause thrombosis -----> mucormycosis
- Granuloma without caseous narcosis-----> Sarcoidosis

- sub dural hematoma occurs due to damage to -----> superior cerebral veins
- Tracheostomy of 45 year old adult level -----> rings 3-4
- gastric emptying inhibited by -----> Cck
- Decrease gastrin secretion is by -----> Secretin
- Labyrinthine artery branch of -----> basilar artery
- Botulinum toxin A and B act via -----> SNAP 25
- Cerebral Metabolic Rate for Consumption of Oxygen is -----> 15-20%
- Moderate exercise will not affected -----> splanchnic circulation (kidney brain was not in option)
- Extreme exercise blood flow will decrease to the kidney (only relevant option)
- hyperkalemia stimulate -----> Renin
- Heart rate is 225 BPM, PR interval is -----> 0.1 seconds
- Aids lymphoma cause -----> EBV
- During treadmill test if heart rate is increased to double then cardiac cycle time will be? -----> 0.4 sec
- Digitalis toxicity increase in -----> hyperkalemia
- deficiencies in patients with recurrent pyogenic infections -----> IgA
- Post splenectomy most common organism -----> Streptococcus pneumonia
- Epithelium of salivary glands -----> stratified cuboidal duct
- Hydrops fetalis type of hypersensitivity reaction -----> type2
- Cotrimoxazole was given to a patient 1 day after presents with cola color urine cause is----->G6PD deficiency

- ✓ Join Fcps-1 online preparation classes (Live Classes) and clear exam in 1st attempt

- Physiologic pulmonary shunt v/Q value -----> below normal
- Scenario indicating Sheehan's syndrome result in -----Adrenal cortex atrophy
- Bronchial asthma feature -----> fev1/frc <65%
- Platelet aggregation is inhibited by -----> Thromoboaxane a2
- Alcholic Pregnant lady best test -----> GGT
- In a pt e sympathetic stimulation whateffect will occur on his heart? -----
-----dec av nodal delay
- Warfarin and hematoma in the thigh cause is -----> protein c deficiency
- Subclavian artery damage -----> 1st rib damage
- Heparin binds to -----> anti thrombin 3
- Herniated disc cause -----> Dec. sensation compress spinal nerve and post root
- Fine miniature movements by artist -----> cortico spinal tract
- Scoliosis is -----> common lumber deformity
- Free nerve endings -----> type c fibers
- Anterior mediastinal mass with MG scenario antibodies are-----
anti-acetylcholine receptor antibodies
- Tumor suppressor gene -----> p53
- Hutington's disease is -----> Autosomal dominant
- Cushing triad -----> Increase BP increase intracranial pressure
decrease heart rate
- DNA -----> transfer genetic material
- red green color blindness due to -----> Cones
- 5th month pregnant lady with thyrotoxicosis DOC -----> Methimazole

- **Propranolol not give to -----> asthmatic patient**
- **Best bioavalibility -----> Hydrophobic yet dissolved in aqueous solution**
- **Ovarian cancer tumor marker -----> ca 125**
- **Fastest nerve fibers -----> A alpha**
- **Most common heart defect -----> VSD**
- **total body water measured by -----> Antipyrin**
- **ECF is different to ICF in? -----> Inorganic anions**
- **Pan chewing results in -----> submucosal fibrosis**
- **Vagus parasympathetic ends at which part of intestine -----> two thirds of transverse colon**
- **Upper free intestine location? -----> paracolic ? (poor recall)**
- **Conducting system lies in -----> subendocardium**
- **Outer most layer of nerve -----> epineurium**
- **Transplant rejection cell involved -----> cytotoxic cells**
- **sjogren syndrome specific test -----> Anti-> SSB**
- **gastric carcinoma is due to -----> H pylori**
- **Mother rh + father rh -> what will happen? -----> Nothing will occur**
- **Spinal nerve arise from -----> intervertebral foramina**
- **Diabetes type 2 patient has increase urinary frequency.. Cause of urination-----Decrease reabsorption of glucose**
- **Heat loss depends upon -----> core body temperature**
- **Diffusion depends on -----> total surface area**
- **Carotid sinus pressure results in -----> decrease HR**
- **2 chromatids parallel appears in -----> Prophase.**

GYNÆ OBS HELD ON 26 FEBRUARY 2020 (MORNING)

(Errors and omissions excepted)

Cram Statements

- Renin secretion inhibited -----> ADH
- Lambert Eaton syndrome antibodies against -----> Ca⁺ channels
- Musculoskeletal growth changes are seen in -----> achondroplasia
- Cervix lymph drainage -----> Internal iliac node
- Howships lacunae have -----> osteoclast
- Pt came with shock what should be given -----> dopamine (poor recall best in options)
- Structure closest to Crus cerebri -----> substantia nigra
- Chi sq test is use for -----> association b/w two variable
- Gets his finger cut by a knife. Which one of the following is primary/early mediator of acute inflammatory -----> histamine
- A patient presented with left sided limb paralysis, paralysis of right lower face and homonymous hemiplegia. Lesion is present in -----> cerebral cortex
- Hook worm infection, what will increase-----> esinophilic chemotactic factor
- Transitional epithelium of bladder is derived from -----> endoderm
- Ovulation does not occur in lactation due to inhibition of GnRH by -----> prolactin
- lactation does not occur in pregnancy due to -----> estrogen

- ✓ Fcps-1 online preparation classes
- ✓ Live interactive sessions with complete theory and past papers discussion

- Patient has microcytic hypochromic anemia, on microscopy of stool eggs were noticed -----> Ancylostoma duodenal
- FSH is inhibited by -----> inhibin
- Nisseria gonorhea -----> gram -ve diplococcus
- On u/s dead hydrocephalus fetus at -2 station, where to insert needle to drain CSF? ----->Posterior fontanelle
- Pt has a hip fracture in a RTA after which when he stands on his left leg his right hip sinks down. -----> left Gluteus minimus /medius
- Antimullarian hormone is produced by -----> sertoli cells
- Local anesthetic cross placenta through? -----> simple diffusion
- Airborn transmission -----> Anthrax (tb, diphtheria are also airborne but they are transmitted by droplets so either chose Tb as common or Anthrax)
- A pt presented to OPD with complaints of easy fatigability, pallor, body aches. Her labs show Hb 6.5, MCV 22, and MCHC 26. What's the underline cause? -----> Iron deficiency anemia
- Bacteria killed by heat method -----> Oxidation
- 90 % of anthrax pt. will have -----> Skin lesion
- Ovary drains into -----> Para aortic
- Ca cervix will by drain by -----> internal iliac
- Failure rate of IUCD -----> <1%
- Thaimine deficiency -----> result in cardiac failure
- Thaimine deficiency result in -----> peripheral neuritis
- During hysterectomy ovarian artery damage at -----> pelvic brim

- ✓ Fcps-1 online preparation classes

- during laparotomy near ovarian fossa which structure is prone to get injured -----> Internal iliac nerve
- Bulbourethral glands part of -----> deep perennial pouch
- Mediolateral episiotomy which structure damaged -----> Bulbospongiosus
- Most common cause of sub-acute bacterial endocarditis:-----> Strep viridian
- Virus cause changes in -----> proto oncogenes
- The half-life of a drug is 10 hours which is given in a continuous infusion. The steady state will be reached in how many hours -----> 60
- Percent of o blood group in population -----> 47
- Grading of a tumor shows? -----> differentiation/type of cell
- Most common cause of non obstetric death in our country-----> domestic violence
- Leukemia pt with chemotherapy done. Which organism cause oral infection -----candida
- Mid value in upper and lower limit is called-----> median
- High karyopyknotic index indicate use for -----> estrogen activity
- In pregnancy -----> Plasma volume increases
- Genotype of true True hermaphrodite -----> xxy
- Graves disease antibodies -----> Antibodies against TSH receptor
- Renal column contains -----> Interlobar artery
- Bromocriptine act on d2 to -----> inhibit prolactin
- Decrease milk production after delivery-----> Defect in which structure Pituitary

- Hydrothiazide causes -----> hypokalemia
- Short acting hypoglycemic agent -----> tolbutamide
- Paramesonephric remnant in males -----> appendix testes
- Chi square test-----confidence interval
- Fetal monitoring continuously by -----> fetal scalp electrode
- In Testicular feminization syndrome-----> Rudimentary' vagina is present
- Characteristic of hymen -----> stratified squamous epithelium that is not keratinized
- Pre-terminal bronchioles contain epithelium -----> Pseudo stratified ciliated Epithelium (poor recall. In actual epithelium of pre-terminal bronchiole is S. Columnar ciliated with goblet cells) [terminal bronchioles have S. cuboidal partial ciliated cells with CLARA cells; goblet cells are absent in terminal bronchioles]
- Generalized Lymphadenopathy feature of -----> infectious mononucleosis
- Uv prolapse and cervix at introitus, damaged structure is -----> uterosacral ligament

Surgery & Allied 26th Feb Evening 2020

(Errors and omissions excepted)

Cram Statements

- proteins cannot pass through basement membrane due to character -----
----> negative charge
- responsible for Cyclic AMP messenger -----> TSH
- neurotransmitters situated at autonomic ganglia is -----Ach
- a patient presented with fever and cough since for last 1 month biopsy show epithelioid cells diagnosis is -----> Tuberculosis
- relation anterior to hilum of right kidney -----> second part of duodenum
- hormone that remains normal during pregnancy -----> growth hormone
- finger cut by knife which is primary mediator in acute inflammation -----
----> histamine
- type of drug will have maximum oral bioavailability -----> Largely hydrophobic, yet soluble in aqueous solutions.
- when temperature is set higher than body temperature there is -----> decrease Sweating
- lymph from fundus of stomach drain -----> celiac LN
- internal jugular vein after emergence to jugular foramen has relation -----
----> anterior to internal carotid artery
- Cretinism different differ from dwarfism -----> mental retardation

- nucleus cutenus and nucleus gracilis responsible for-----> astereognosis
- factor 8 is produced by -----> endothelium
- Bronchopulmonary segment is aerated by -----> tertiary bronchus
- Parasympathetic nerves -----> are pelvic splanchnic nerves
- complication regarding intervention procedures -----remain within limits of professional competence regarding
- smooth muscles has larger of-----> both circular and longitudinal muscles
- Test for amoebic liver abscess -----> serology
- Dormant state of malaria parasite -----> hypnozoites
- Organism produce fluorescent pigment and is resistant to beta-lactam ----> pseudomonas
- Hemoglobin is 10 gram oxygen saturation 90% pO₂ 60 calculate oxygen content -----13% (1 grm Hb contain 1.34ml Oxygen so 10g ×1.34=13.4)
- Type of necrosis in pancreatitis-----> fat necrosis
- in dehydration thirst is stimulated by-----> angiotensin II
- Which of the following crosses Placenta in pregnant female -----> thyroxin
- during meiosis abnormality may occur if one of the cell gets and extra chromosome instead of haploid numbers this condition is -----> trisomy
- Lambert Eaton syndrome has antibodies targeted against -----> voltage-gated Calcium channel

- ✓ Join Fcps-1 online preparation classes

- Which of the following is a tumor suppressor gene -----> p53
- Lymphocyte form blood enter in lymph node via -----> subscapular efferent arteries
- Which is spore forming bacteria -----clostridium
- Upper motor neuron lesion features -----> hyper reflexia
- liver is attached to interior abdominal wall -----> falciform ligament
- Thyroglobulin is synthesized -----> follicular cells
- a patient with hb 15 oxygen content of HB 20 ml PO2 45 arterial oxygen 40 oxygen 15 type of hypoxia -----> hypoxic hypoxia
- Abdominal angina is due to -----> Superior mesenteric artery
- an isolated complete rupture of anterior cruciate ligament will result in in stability of Tibia over femur the direction of instability will be -----> anterior
- Pt under gone tubal ligation. Post-> operative her abdomen was reopened due to slippage of ligature hemorrhage. Bleeding most probably from which artery? -----uterine artery
- Regarding skeletal muscle belly -----> fleshy throughout the length
- The largest cross section area is -----> capillaries
- Small cell carcinoma of lung causes -----Cushing syndrome
- young patient with decrease urine output BP 160 by 120 has defect -----> juxtaglomerular cells
- Drug of choice for bacterial meningitis -----> ceftriaxone
- The joint between vertebral bodies -----> symphysis
- Major lipoprotein source of cholesterol used in cells -----> LDL

- A man heard better noise in environment than alone -----> otosclerosis
- grading determines degree -----> anaplasia
- used to measure total body water weight -----> antipyrine
- Involvement of which part of brain control direct autonomic reflexes ----->> hypothalamus
- patient come to you with portal hypotension most commonly dilated ----->> esophageal vein
- Example of drug receptor interaction -----> labetalol bradycardia
- Albumin RBC cast and cells in urine possible site of damage -----> glomerulus
- Significantly raised Alpha fetoprotein is characteristic -----> hepatocellular carcinoma
- gastric pain since three years columnar cells above cardia -----> diagnosis metaplasia
- data collected for some clinics trial based on presence or absence of vomiting what type of data -----> nominal data
- Which cancer has virus etiology -----> T cell leukaemia
- Strongest layer in git-----> submucosa
- Amen known case of hypertension presented with shortness of breath pulmonary edema cause -----> hydrostatic pressure
- Pancreatic trypsin enzyme converts to active form with the help of -----> enterokinase
- Thiazide causes-----> hypokalemia
- Hypo chlorothiazide causes -----> hyperuricemia

- ✓ Join Fcps-1 online preparation classes

- Mechanism of action of cemitidine -----> inhabit hepatic metabolism
- Most common lobe of prostate cancer -----> posterior
- Prostate cancer metastasize via-----> vertebral plexus
- patient with peptic ulcer has epigastric pain that referred which has pain is mediated by-----> greatest splenic nerves
- A patient with proper relapsed shows increased PT and ptt bleeding time is normal cause -----> deficiency factor 8
- Structures prone to damage at lateral pelvic wall -----> ovarian artery
- scenario of bleeding and epistaxis with prolonged bleeding time of 20 minutes diagnosis -----> Von will brand disease (bleeding time is raised defect of platelets)
- in middle trimester pregnancy hematopoiesis occurs -----liver of fetus
- Greenish first discharge after Operation. Organism is ----- pseudomonas
- Religion in which area cause resting tremor and expressionless face ----- ---> substantia nigra
- Regarding left coronary artery -----> supplies bundle of his
- which muscle extends from femur having role in stability of knee joint ----- ----vastus lateralis
- In hypovolemic shock the decrease glomerular filtration is due to decrease -----> arterial blood pressure
- Regarding cauda equina anterior and posterior roots of spinal form ----- L1 L5

- Regarding vibrio cholerae transmitted -----> drinking water and uncooked food
- Oxygen is transferred from alveoli to pulmonary capillaries -----> passive diffusion
- Heprin is naturally produced -----> mast cells
- Right ovarian vein drains into -----> inferior Vena cava
- Cells get stained due to -----> ribosome
- In which phase of cell cycle are sister chromatid arranged parallel -----> Prophase
- 5 year boy presented with fever and progressive lithology blood reports head 7 HP WBC 3. 2 10% neutrophil platelets 50 thousand appropriate investigation -----> bone marrow biopsy
- Structure passes under the free margin of lesser omentum -----> bile duct hepatic artery portal vein
- Tuberculin test done to patient after 40 hours 15mm erythema is noticed cell responsible for this -----> cytotoxic t cells
- a patient with bleeding oozing from a site he has developed generalized swelling hb was low reason of swelling -----> decreased albumin
- Coronary blood flow is mainly maintained by -----> myocardial oxygen demand and consumption
- spinal grey matter receiving neuron stimulus -----> lamina 1
- a man involved in RTA with structure you noticed abdomen is moving more during breathing which muscle is helping him breathing -----> external intercostal muscle

- Iron is stored in form of -----> hemosiderin
- Landmark of pudendal nerve block is -----> ischial spine
- Raised heterophile antibody titre -----> infectious mononucleosis
- melenoma normal reaches orbital cavity through -----> Emissary vein
- how to prevent cross region related cytomegalovirus infection Pakistan ---
-----screening the blood before transfusion
- PAS is positive in -----whipple's disease
- Thirst activated by -----extracellular dehydration
- index of total peripheral resistance in circulation is -----> mean
arterial pressure
- structured lies superficial to sternodeidomastoid -----external jugular
- Cervical carcinoma lymphatic drainage-----internal iliac lymph node
- Case on cervical cancer a lady has multiple sexual partners cause -----
HPV
- Appendicular artery is branch of -----> iliocolic
- Membranous ossification Centre -----> distal end of femur
- Loss of abduction at arm nerves involve -----axillary and suprascapular
nerve
- child came in emergency with fever and strider investigation for -----
throat swab culture
- Female press patient present fever rash on tonsil and koplic spots on Oral
mucosa diagnosis -----> measles
- Damage to ulnar nerve at elbow -----medial 2 lumbricals (best in options)

Surgery & Allied 26th Feb Night 2020

(Errors and omissions excepted)

Cram Statements

- Nerve continuation of the medial cord -----> ulnar
- Loss of supination of arm lesion in -----> musculocutaneous and radial nerve
- Fatty liver in kwashiorkor scenario-----> aflatoxin
- Organism with multiple discharging sinuses-----> Actinomycetes
- Artery most likely damaged during difficult C-section-----> Uterine
- Lymphatic drainage of skin of glans penis-----> Superficial inguinal lymph nodes
- Inorganic compound causing carcinoma-----> Asbestosis
- In breast CA surgery, Sentinel lymph node is resected to-----> Prevent axillary lymph node clearance
- structure most likely to be damaged during appendectomy is -----Iliohypogastric nerve
- Structure which leaves the gluteal region by passing above the piriformis muscle-----> Superior gluteal artery
- Person is unable to scratch his back. Muscle most likely involved-----> Lattismus dorsi
- Floor disinfectant after HIV positive surgery -----1% hypochlorite
- 39 year old lady complain of nausea and vomiting from last 5weeks, after endoscopic biopsy reveal plasma cell, macrophage and t lymphocytes -----> H. Pylori
- Lymphatic drainage of prostate -----> internal ilic nodes
- lost eversion, muscle involve-----> muscle anterior and posterior tibial
- Special feature about the epithelium of vagina-----> Contains abundant elastic tissue
- Pan systolic murmur is heard in-----VSD
- IVC blocked just above azygous, blood goes into-----rt ascending lumbar veins
- Short gastric artery are the branches of-----> Splenic artery
- Person falls on outstretched hand and injured his wrist. Which structure will get damaged while passing superficial to flexor retinaculum-----> Ulnar artrey and nerve
- Clavicle fractured, which muscle injured-----pect major (best in recalled option)
- Pain in right hypogastrium soon after fatty meal -----> due to gallbladder

www.facebook.com/GynaeObsWorld

- Reticular fibers seen in? -----> tonsils
- Infertility, azospermia due to-----> sertoli cell
- Artery not leaving true pelvis-----middle rectal
- Treachostomy level -----> 2C-3C (adults) ; C3-C4 (children)
- Kala azar scenario -----patient from balochistan, sleeps on floor, splenomegaly
- Anti-mitochondrial antibodies, Pruritus diagnosis -----> PBC
- Orofecal route-----HEV
- S3 sound shows-----ventricular filling
- cheilosis, scaly dermatitis, glossitis due to deficiency of -----> riboflavin
- in Factor 8 deficiency what can be given -----> cryoprecipitate
- Daily protein requirements -----> 0.8g/1gm
- Calcitonin given in -----> Paget's disease
- Wernicke area lesion result in -----> speaks fluently but no sense
- bone formed by both intramembranous and endochondrial ossification -----> mandible
- Patient can't close eye nerve damaged -----> facial
- CBD relation to pancreas is -----> posterior / embedded
- Highest pH in secretions of -----> pancreas
- Prolonged APTT is feature of -----> haemophilia
- Grading shows -----> degree of differentiation
- Staging show -----> extend of invasion
- Main support of uterus -----> transverse cervical ligament
- vaginal prolapse due to weakness of -----> uterosacral ligament
- During exercise -----> Decrease TPR
- Clavicle fracture, Can't rotate Arm laterally -----> Teres Minor
- Prostate MAINLY drains into -----> Internal iliac nodes
- Proliferation of endometrial -----> Progesterone
- Skin of glans penis drains into? -----> Deep inguinal nodes (superficial if deep is not present)
- Negative free water loss occurs -----> SIADH
- Boy with erection loss and breast development hormone responsible -----> prolactin
- cancer due to radiation -----> meningioma

- type of narcosis in liver -----> coagulative necrosis
- Child tumor with blue cells and gene amplification -----> Neuroblastoma
- Heat kills bacteria by -----> oxidation (ref. heat sterilization)
- Active sodium absorption occurs in -----> colon
- Submucosal glands found in gut in -----> duodenum (burner's gland)
- Hoarseness of voice and mass in brain nerve involve -----> vagus
- Prominent U wave on ECG cause is -----> hypokalemia
- Lady with RTA has risk of -----> fat embolism
- Liver to body wall attachment -----Falciform ligament
- Sympathetic Nerve supply of jejunum -----> Greater and lesser splanchnic nerve (parasymp. Is by vagus)
- Boy fall from cycle, anuria cause -----> rupture of urethra
- Posterior ventricular grooves content ----- posterior interventricular artery and middle cardiac vein
- Nerve supply of pleura -----> phrenic nerve
- Neurotoxin that selectively cleaves the synaptic protein SNAP-25 -----> botulinum a and b
- Post triangle neck -----> Base by middle 3rd clavicle
- Enzyme to determine Reinfarction --> CKMB
- Aphasia result from damage to -----> temporal lobe
- Least in blood -----> Basophils
- Change of shape cell -----> Dysplasia
- Structure damage above piriformis -----> superior gluteal artery
- MAIN lymph drainage of Breast-----> Axillary lymph nodes on axillary vessels
- Damage in Post triangle muscle damage -----> Trapezius
- House Officer taking ABGs in -----> heparinized Tube
- Femoral artery felt at-----Mid inguinal point
- Superficial to Flexor Reticulum -----> Ulnar Nerve and Ulnar Artery.
- Common peroneal damageresult in loss of -----> Eversion of foot
- After running there is echymosis Athlete, can stand but painful -----> plantar rupture
- What is the least important thing during first interaction with patient:-----showing your authority

- Pregnancy women asked to left semi prone position to dec pressure on -----> IVC
- I/v urography of 8 years old boy shows normal right kidney but absence of shadow on left side
Instead there is small shadow just above the bladder on left side -----> pelvic kidney
- reticuloendothelial system affected in-----> histoplasmosis
- Pulmonary artery embolism will cause V/Q to -----> Decrease
- V/Q lower than normal in -----> shunt
- Max o₂ is present in -----> Umbilical vein
- Cholera Food and water -----> resistance to alkaline pH
- In pregnancy asked to left semi prone position to Dec pressure on -----> IVC
- I/v urography of 8 years old boy shows normal right kidney but absence of shadow on left side
Instead there is small shadow just above the bladder on left side -----> pelvic kidney
- Vasoconstriction in lungs is caused by -----> hypoxia
- HIV pt, post-surgery OT floor cleaning agent: -----> 1% Hypochlorite
- Lady in kitchen has cut her middle finger immediately effect-----> vasoconstriction (best among recalled options)
- landmark for NVD -----> ischeal spine (if not then sacral promontory)
- Difficult C — Section has been done. Which artery will be damage? -----> uterine artery
- Tumor which invade nerve sheet? -----> ex pleomorphic adenoma
- most likely Tumor after radiation -----> Meningioma
- transmission by Oro-fecal rout -----> HEV
- site of Pudendal nerve block -----> ischial spine
- injury to TMJ joint, muscle damage -----> Lateral pterygoid
- Morphine causes-----> tachycardia + miosis
- Primordial germ cells derived -----> At the end of 3rd week
- Adrenal gland supply -----> Greater splanchnic nerve
- Scenario of Splinter hemorrhage ,Bacterial endocarditis best test -----Blood culture
- Endometrial proliferation is by hormone -----> estrogen
- Corpus luteum produces -----> estrogen +progesterone +inhibin.
- Vomiting center is in -----> medulla
- corpus blood oozing out -----> Corpus hemorrhagicum
- Corticospinal tract responsible for -----> voluntary movements

www.facebook.com/GynaeObsWorld

- Aphasia occurs due to damage to -----> temporal lobe
- Most malignant tumor is -----> melanoma
- Speak easily but senseless -----> Wernicks area damage
- Main action of insulin -----> entry of glucose
- Premature baby, jaundice and easy bruising, mom takes antibiotics in pregnant -----> vitamin K.
- RIGOR MORTIS occurs due to -----> Dec. ATP
- Medical student hold 3 book, took next book resulted in Dropped all -----> inverse flexor reflex
- Drug given have highest 1st pass metabolism-----> epinephrine
- Painful parotid swelling is carried by-----> auriculotemporal nerve
- Steady pressure is sensed by -----> Ruffini corpuscles
- Estrogen producing tumor -----> Granulosa cell
- Cytokeratin is -----> Intermediate filament
- Malignant hyperthermia caused by -----> ryanodine receptors mutation
- Shortest pro-erythrocyte stage is character of -----> Falciparum
- In CRF undergoing dialysis, important to monitor -----> K⁺ [IN CRF creatinine is already raised, we look for K⁺ levels which may cause arrhythmias)
- For vitamins deficiency, best advice to take -----> vegetables
- Reinfarction can be determine by -----> CK MB
- Good analgesic but not so good anesthesia -----> nitric oxide
- Nor epinephrine release from -----> Post ganglionic sympathetic nerve fiber
- Definite sign of ovulation -----> Ferning of cervical
- Delivery of baby is example of -----> Positive feedback
- Branch of internal illiac artery remain to true pelvis -----> middle Rectal artery
- in patient of HIV what is the most likely skin cancer -----> Kaposi sarcoma
- In Athletes at rest there is -----> increase Stroke volume as compared to normal people
- Iron deficiency anemia is best diagnosed by -----> serum ferritin
- Cholangiocarcinoma is caused by -----> Clonorchis sinensis
- Multiple draining abscess -----> Actinomycosis

www.facebook.com/GynaeObsWorld

- Musculoskeletal growth changes are seen in which disease -----> Achondroplasia
- In the formation of thyroid hormone synthesis the first step is binding of iodine to -----> B thyroglobulin
- Caucassian community o positive group -----> 47%
- In liver disease edema is due to -----> dec oncotic pressure
- Pus in adductor canal will damage -----Femoral vein
- Biopsy of axillary node in breast CA because of -----> help in prognosis
- Premature baby born, most common cardiac abnormality -----> PDA
- Stress hormone is -----> ACTH (cortisol was not in option, cortisol is secreted due to ACTH, CPSP changed old stem)
- New born with blue red tumor on face -----> Hemangioma
- Corticosteroids long term adverse effects -----> Osteoporosis
- Blood is warmed at 37°C before transfusion for the following reason -----> Left to right shift
- Red-green color blindness -----> X-linked recessive disorders
- Conversation of one normal epithelium into other normal epithelium -----> Metaplasia

E.N.T 25th Feb Morning 2020

(Errors and omissions excepted)

Cram Statements

- In Old patient Dvt due to -----> Stasis and hypercoagulable
- Common side effect of protamine-----Hypotension
- A patient in RTA with fracture clavicle depressed posteriorly , which structure will be damage at sternal end of clavicle -----> sub clavian vein
- Definitive characteristics of malignancy -----> metastasis
- High out cardiac failure -----> Thiamine deficiency
- A pregnant lady RH positive and husband RH negative. She has come for advice; how will you counsel them? -----> don't worry
- Blood supply to which organ not change in moderate exercise -----> brain
- Cardiac injury increased Despite of the treatment is Due to -----> Free radicals
- Feco-oral transmission-----Hep E
- In Acute blood loss 500ml in 30 mints-----Normocytic normochromic
- Lymph flow is decreased by -----> hemorrhage
- At beach site sunburn effect -----> Direct endothelial injury
- In newborn -----> thorax is circular
- Capillary permeability increase in -----> inflammation
- Parasympathetic effect excluding sweat gland-----> Increase secretions
- Parasympathetic effect -----> Dec HR
- External nose surgery which nerve to be blocked?-----> ophthalmic

- A 6 week baby with stained diaper -----> biliary atresia
- Phrenic nerve branch of -----> c3
- Regarding pseudohypoparathyroidism -----> PTHrp is released by tumour cells
- Advanced hepatic encephalopathy caused by -----> paracetamol overdose
- Rosen Muller fossa -----> posto superior to the torus tubarius
- Pre Hemoglobin binds to-----Haptoglobin
- Testosterone levels very less in age group.. -----> preschool
- Most abundant immunoglobulin-----IgG
- Enzyme action by-----Dec the energy of reactants
- O2 transport in the blood depends on-----Amount of Hb in the blood
- Co2 in the blood more -----In Dissolved form/Hco3
- Qualitative change in gene mutation-----Point mutation
- Patient with failing heart and fainting -----> Treatment Epinephrine/dopamine
- During phospholipase reaction -----> Ca ion
- Unipennate muscle fibers arrangements -----> converge on one side
- typical cystic fibrosis test for diagnosis -----> Sweat chloride test
- In acute MI changes in EcG---Misdisplacent St segment (t wave inversion occurs after st changes wikipedia)
- Micturation reflex area-----> sacral plexus
- Micturition center is in -----> pons
- Tip of nose supported by -----> alar cartilage

- ✓ Join Fcps-1 online preparation classes (Live Classes)

- Loose areolar tissue is found in -----> subcutaneous tissue
- Cephalhematoma location ----> Pericranium
- Palatine tonsils drains -----Jugulodiagastric nodes
- Vestibule cochlea is -----> purely afferent
- Most common carcinoma of oropharynx -----> sq cell
- Lower esophageal cancer -----> Adeno carcinoma
- Tumor marker is -----> keratin
- Ovarian CA tumor marker-----> CA 125
- Diabetes with fungal infection. Cause is -----> mucor mycosis
- Micturition is inhibited by continuous firing of -----> pudendal nerve
- Linear acceleration is sensed by -----> utrica
- Semi-circular canals in cortex of ear are maximally stimulated? -----> cartwheel
- stria vascularis -----> The upper portion of the spiral ligament (which forms the outer wall of the cochlear duct) contains numerous capillary loops and small blood vessels, and is termed the stria vascularis. It produces endolymph for the scala media, one of the three fluid-filled compartments of the cochlea.
- Cavernous sinus thrombosis eye swelling. blocked vein responsible is -----> sup ophthalmic vein
- Pan chewer is at risk of -----> submucosal fibrosis
- Downward movement of tongue is by -----> hyoglossus
- Right side deviation of tongue -----> right nerve damaged

- ✓ Join Fcps-1 online preparation classes (Live Classes)
- ✓ Live interactive sessions with complete theory and past papers discussion

- Palatoglossus is the only muscle of the tongue that is not innervated by the hypoglossal nerve (CN XII). It is innervated by the pharyngeal branch of the -----> vagus nerve
- corda tympani damage -----> change taste
- aditus receive -----> short process of incus
- Cushing syndrome character -----> purple stria
- bp below 60 mmhg response will be-----> cns ischemic response
- levator veli palatini opens in -----> eustachian tube
- parotid duct epithelium -----> tall columnar epithelium
- gastrin is secreted by -----> pyloric antrum of the stomach, duodenum, and the pancreas
- most infective phase Hep B -----> HBsag+ve HBe +ve
- is transmitted by feco-oral route -----> hev
- young patient with fruity odor -----> DKA
- voice production is by-----> vocal cord
- roof of external auditory canal blood supply -----> superficial temporal artery supplies the anterior part of the external acoustic meatus, (poor recall)
- blood supply of middle ear -----> deep auricular artery
- near the base -----> high-frequency or high-pitch sound heard
- infectious mononucleosis test is -----> heterophile antibodies
- stapedius -----> Origin-----> Walls of pyramidal eminence. Insertion in ----Neck of stapes
- FB inhaled entrap in most commonly in-----> rt main bronchus

- Most narrow part of bone -----> internal nasal valve (or posterior concha)
- Delayed wound healing -----> poor blood supply is cause
- After Broken clavicle moves upward due to -----> SCM action
- After pop cast muscle show -----> disuse atrophy
- Type of hyper sensitivity in diphtheria -----> type3
- Soldier from high altitude with head ache. Cause is -----> 2ndry polycythemia
- After gastrostomy -----> b12 IV should be given
- Rash in Utrica is -----> type 1 hyper sensitivity example
- Recurrent laryngeal nerve supply -----> all the intrinsic muscles of the larynx, with the exception of the cricothyroid muscles.
- Obesity with high TSG, low -----> T4
- internal laryngeal nerve passes between-----> thyroid and cricoid
- in hypothyroidism -----> cholesterol increase
- Only motor supply to Diaphragm -----> c3 phrenic
- Incus -----> lies in mesotympanum and also short process lie in attic
- nerve supply to the Stapedius is-----> branch of facial
- Podocyte location in kidney-----> on visceral layer of capsule
- Alveolar supply -----> tertiary bronchi (poor recall options)
- tensor veli palatini muscle is innervated -----> mandibular division of the trigeminal nerve
- Nystagmus -----> Nystagmus is a vision condition in which the eyes make repetitive, uncontrolled movements. These movements often result in

reduced vision and depth perception and can affect balance and coordination. These involuntary eye movements can occur from side to side, up and down, or in a circular pattern.

- Killian dehiscence is a triangular area in-----> inferior constrictors
- Pseudomonas aeruginosa is -----> fluorescent & resistant to penicillin
- Woodruff's plexus-----> located below the posterior end of the inferior concha, on the lateral wall of the nasal cavity.
- Typical scenario of Antimalarial causing cola colored urine. Cause -----> G6pd deficiency
- Warfarin MAO -----> competitively inhibits the vitamin K epoxide reductase complex 1
- Low minerals -----> Tubers
- Most resistant part in nose-----> posterior nasal aperture
- Medial umbilical ligament remnants of -----> urachus
- Trauma to parietal region to a cricket player -----> damage MMA
- Sympathetic system -----> T1 -> L2
- Maxillary course through rotundum -----> in pterygopalatine fossa
- Cabergoline is -----> d2 agonist
- Histoplasmosis -----> involve reticuloendothelial system
- Syphilis character -----> Gummatous
- Apex of heart is supplied by -----> LAD
- Salvation is by -----> Glossopharyngeal
- Thalamus is primary sensory cortex except -----> olfaction
