GoldStandard FCPS

by FCPSWORLD

Quick Book

Gynae & Obs

(50 to 60% paper is from this file

Inshallah)

- ✓ Clear FCPS-1 in **FIRST ATTEMPT**
- ✓ Entire course will be completed in 2 months.
- ✓ Live lectures via video Portal
- ✓ Daily Test session (Test discussion will be on Via Portal)
- ✓ Follow our complete guideline for FCPS-1
- ✓ Get Hands on 20,000 CPSP question (most of them repeat)
- ✓ Free study material, [whatsapp](#) group (only for our students)
- ✓ Don't Miss the chance. (LIMITED SEATS AVAILABLE.)
- ✓ WWW.FCPSWORLD.com
- ✓ WWW.facebook.com/fcpsworld
- ✓ For Details Phone# 03129684658

- ✓ Now you can join us Online for MD/MS & Fcps Preparation
- ✓ Complete course in 2months including Past paper discussion
- ✓ Join from anywhere using mobile/laptop using internet
- ✓ 100% feasible with job and 100% time adjustment for students
- ✓ www.fcpsworld.com or Contact 03129684658
- ✓ Hostel Facility is also available (for those who want to join physical classes)

- ❖ after emerging juglar formina immediate relation of internal jugular vein is ----- Int carotid artery
- ❖ Level of body of hyoid bone ----- c3
- ❖ Condyloma acuminatum is feature of ----- herpes simplex
- ❖ Blood supply of stylohyoid bone ----- facial
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ Site of lumber puncture ----- l3 – l4
- ❖ Cauliflower lesions on perianal region causative agent -----HPV
- ❖ Softening of cervix is due to ----- prostaglandin
- ❖ incisional hernia first affects ----- Transversalis fascia
- ❖ Internal oblique forms ----- conjoint tendon
- ❖ Pre-eclamptic patient in OT for emergency LSCS. Her BP is 190/110 mm of Hg. drug use -----Hydralazine
- ❖ In megaloblastic anemia give ----- IV vit b12
- ❖ In Duchene muscular dystrophy protein defect ----- dystrophin
- ❖ Medial quadrant of the breast drains into ----- internal thoracic LN
- ❖ Testicular swelling. LDH raised ----- seminoma
- ❖ Pregnant women fever with rigors m chills vaginal watery discharge ----- Chorioamnionitis
- ❖ post op pain treatment ----- paracetamol
- ❖ PDA close by administer ----- indomethacin
- ❖ Treatment of hyperthyroidism in 20w pregnancy ----- Methimazole
- ❖ Longest incubation period of which mosquito specie ----- Falciparum malaria
- ❖ Renin secretion inhibited ----- ADH
- ❖ Lambert Eaton syndrome antibodies against ----- Ca+ channels
- ❖ Musculoskeletal growth changes are seen in ----- achondroplasia
- ❖ Cervix lymph drainage ----- Internal iliac node
- ❖ Howships lacunae have ----- osteoclast
- ❖ Pt came with shock what should be given ----- dopamine (poor recall best in options)
- ❖ Structure closest to Crus cerebri ----- substantia nigra

- ❖ Chi sq test is use for ----- association b/w two variable
- ❖ Gets his finger cut by a knife. Which one of the following is primary/early mediator of acute inflammatory ----- histamine
- ❖ A patient presented with left sided limb paralysis, paralysis of right lower face and homonymous hemiplegia. Lesion is present in ----- cerebral cortex
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Hook worm infection, what will increase----- esinophilic chemotactic factor
- ❖ Transitional epithelium of bladder is derived from ----- endoderm
- ❖ Ovulation does not occur in lactation due to inhibition of GnRh by ----- prolactin
- ❖ lactation does not occur in pregnancy due to ----- estrogen
- ❖ Patient has microcytic hypochromic anemia, on microscopy of stool eggs were noticed - ----- Ancylostoma duodenal
- ❖ FSH is inhibited by ----- inhibin
- ❖ Nisseria ghonorrhoea ----- gram -ve diplococcus
- ❖ On u/s dead hydrocephalus fetus at -2 station, where to insert needle to drain CSF ---- -----Posterior fontanelle
- ❖ Pt has a hip fracture in a RTA after which when he stands on his left leg his right hip sinks down. ----- left Gluteus minimus /medius
- ❖ Antimullarian hormone is produced by ----- sertoli cells
- ❖ Local anesthetic cross placenta through ----- simple diffusion

Airborn transmission ----- Anthrax (tb, diphtheria are also airborne but they **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**

- ❖ are transmitted by droplets so either chose Tb as common or Anthrax)
- ❖ A pt presented to OPD with complaints of easy fatigability, pallor, body aches. Her labs show Hb 6.5, MCV 22, and MCHC 26. Whats the underline cause ----- Iron deficiency anemia
- ❖ Bacteria killed by heat method ----- Oxidation
- ❖ 90 % of anthrax pt. will have ----- Skin lesion
- ❖ Ovary drains into ----- Para aortic
- ❖ Ca cervix will by drain by ----- internal iliac
- ❖ Failure rate of IUCD ----- <1%

- ❖ Thiamine deficiency ----- result in cardiac failure
- ❖ Thiamine deficiency result in ----- peripheral neuritis
- ❖ During hysterectomy ovarian artery damage at ----- pelvic brim
- ❖ during laparotomy near ovarian fossa which structure is prone to get injured ----- Internal iliac nerve
- ❖ Bulbourethral glands part of ----- deep perineal pouch
- ❖ Mediolateral episiotomy which structure damaged ----- Bulbospongiosus
- ❖ Most common cause of sub-acute bacterial endocarditis----- Strep viridians
- ❖ Virus cause changes in ----- proto oncogenes
- ❖ The half-life of a drug is 10 hours which is given in a continuous infusion. The steady state will be reached in how many hours ----- 60
- ❖ Percent of o blood group in population ----- 47
- ❖ Grading of a tumor shows ----- differentiation/type of cell
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ Most common cause of non obstetric death in our country----- domestic violence
- ❖ Leukemia pt with chemotherapy done. Which organism cause oral infection ----- candida
- ❖ Mid value in upper and lower limit is called----- median
- ❖ High karyopyknotic index indicate use for ----- estrogen activity
- ❖ In pregnancy ----- Plasma volume increases
- ❖ Genotype of true True hermaphrodite ----- xxy
- ❖ Graves disease antibodies ----- Antibodies against TSH receptor
- ❖ Renal column contains ----- Interlobar artery
- ❖ Bromocriptine act on d2 to ----- inhibit prolactin
- ❖ Decrease milk production after delivery----- Defect in which structure Pituitary
- ❖ Hydrothiazide causes ----- hypokalemia
- ❖ Short acting hypoglycemic agent ----- tolbutamide
- ❖ Paramesonephric remnant in males ----- appendix testes
- ❖ Chi square test-----confidence interval
- ❖ Fetal monitoring continuously by ----- fetal scalp electrode
- ❖ In Testicular feminization syndrome----- Rudimentary vagina is present

- ❖ Characteristic of hymen ----- stratified squamous epithelium that is not keratinized
- ❖ Pre-terminal bronchioles contain epithelium ----- Pseudo stratified ciliated Epithelium (poor recall. In actual epithelium of pre-terminal bronchiole is S. Columnar ciliated with goblet cells) [terminal bronchioles have S. cuboidal partial ciliated cells with CLARA cells; goblet cells are absent in terminal bronchioles]
- ❖ Generalized Lymphadenopathy feature of ----- infectious mononucleosis
- ❖ Uv prolapse and cervix at introitus, damaged structure is ----- uterosacral ligament
- ❖ Hyaline cartilage is present in---->larynx
- ❖ After rta, patient cannot speak and produce sound, lesion at----> motor cortex
- ❖ Ovulation does not occur during lactation due to inhibition of gnrh by---->prolactin
- ❖ A tall man with high bitemporal hemianopia and infertility. What is the most likely cause---->prolactinoma
- ❖ Surface epithelium lining of the ovary is by---->simple cuboidal
- ❖ Uv radiation causes ---->cataract
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Lobe has only 2 bronchopulmonary segments---->right middle lobe
- ❖ Tractus solitarius is formed by---->2nd order neurons
- ❖ Small intestine shows numerous crescent-shaped protozoa adjacent to epithelial brush border. Pathogen involved---->giardia lamblia
- ❖ After pregnancy and parturition, uterus size reduced by---->lysosomes
- ❖ Pain of ovary transmitted to medial part of thigh---->obturator nerve
- ❖ Anteroposterior diameter of eye ball----> 22-26
- ❖ Pia mater---->extends into sulci and fissures of brain tissue
- ❖ Daily protein requirement of an adult man ---->1 gm/kg
- ❖ pricked needle and has signs of inflammation with distal interphalangeal joint pain. If left untreated, ---->paronychia
- ❖ Cyclosporin given after organ transplantation. Mode of action of cyclosporin ---->inhibits differentiation of t cells
- ❖ Resection of ileum and some part of jejunum cause 10 to 20 bowel movements per day .cause is---->osmotic plus secretory diarrhea
- ❖ Conduction speed is the slowest in---->av node
- ❖ Asthma patient having respiratory rate 30/min and is dyspneic. The finding---->decrease paco2
- ❖ Bladder neck of the female urethra lies---->upper surface of urogenital diaphragm

- ❖ Graves ophthalmopathy---->opatientic nerve compression
- ❖ Pale infarct occur in---->embolic/ischemic stroke
- ❖ Antiemetic is used for vomiting after chemotherapy sessions----->ondansetron
- ❖ Patient with trauma to eye by a wooden stick----->fungus
- ❖ Patient with paracetamol overdose with liver disease, antidote-----> n-acetylcysteine
- ❖ Anaesthetic drug causes cardiacstimulation, increase heart rate and bp----->ketamine
- ❖ In shock vessel is the best site to prick to take sample for lab investigation----->femoral
- ❖ Unmyelinated nociceptive primary afferent fibers synapse directly neurons in the spinal cord----->spinothalamic neuron in lamina propria
- ❖ Enzyme is activated by enterokinase----->trypsinogen
- ❖ 4-year boy with painful, tender, swollen knee joints. Most appropriate investigation - ---->factor 8 assay
- ❖ Type of hypersensitivity in myasthenia gravis----->type 2
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Is not parasympathetic---->tubal
- ❖ Ureter ---->crosses at bifurcation of common iliac artery
- ❖ Bronchopulmonary segment----->supplied by segmental bronchus with terminal branch of artery
- ❖ Most common cause of subfertility is----->failure of ovulation
- ❖ Carcinogenic----->asbestosis
- ❖ Superficial epigastric artery is a branch of----->femoral artery
- ❖ At 8 week mostly gonadal ridges of both sexes are same but what point will be different in boys----->testes descend with gubernaculum
- ❖ Drusens present between-----> basement membrane of rpe and inner collagenous layer of bruchs membrane
- ❖ Nerve supply to the back muscle is from----->dorsal rami of posterior spinal nerve
- ❖ Choriocapillaries are derived from-----> short posterior ciliary artery
- ❖ Basophilia of cell is due to----->ribosomes
- ❖ Deep inguinal ring is a defect in----->transversalis fascia
- ❖ Extrinsic and intrinsic pathway of coagulation of merge at----->stuart factor
- ❖ Fruity- scented breath, diagnosis----->dka
- ❖ X-ray showed left apical consolidation. Mantoux +ve dx----->tb
- ❖ Organ is present completely in peritoneal layers----->proximal part of duodenum
- ❖ hallow structure around the nucleus. What could it likely be----->lysosomes

- ❖ Heterozygous allele equally prominent----->codominance
- ❖ What is meant by professionalism of a doctor----->polite and good bedside manners
- ❖ Major difference between cortisol and gh is----->cortisol increases during stress surgery
- ❖ Triplet arrangement of microtubules----->centriole
- ❖ The conducting system of the heart is made up of----->specialized cardiac muscle
- ❖ Anterior boundary of lumbar triangle is formed by----->by posterior border of external oblique muscle.
- ❖ A patient after cva has loss of appetite to food likely lesion is in----->hypothalamus
- ❖ Main role of feedback inhibition-----> bring hormone to normal level
- ❖ Spermatogenesis is stimulated by----->fsh and testosterone
- ❖ Nuclear sclerosis cataract occurs due to-----> protein degeneration in lens
- ❖ Anti-malarial drug is used for treatment of chloroquine-resistant falciparum malaria-->artemisinin with combination
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ Pharmacokinetic interaction among drugs is exemplified by----->increase toxicity of methotrexate by aspirin
- ❖ Increased icp, blood pressure increases to regulate cerebral blood flow. This is known as ----->cushing reflex
- ❖ Fisherman develop ecchymosis and bleeding gums. Deficiency of----->vitc
- ❖ Heart muscles works as syncytium due to----->gap junction
- ❖ Fsh is inhibited in males by----->inhibin
- ❖ True about clostridium----->mainly are spore forming
- ❖ The 2 kidneys are differentiated from each other by----->structures at hilum
- ❖ Swelling at back at level of t10 lymphatic drainage----->axillary
- ❖ One standard deviation means----->both side of mean in normal distribution curve
- ❖ In snellens chart, the angle which is subtended by each letter is most likely ----->5 minutes of arc
- ❖ Hypertrophy and hyperplasia are both seen----->uterus in pregnancy
- ❖ Infant having cyanosis crying along with vsd and pulmonary stenosis, disease----->transposition of great vessels
- ❖ Paracetamol antidote----->n -acetylcysteine
- ❖ Superficial epigastric artery ascends through----->saphenous opening
- ❖ Stab wound on right side below lateral to umbilicus will cause injury to----->ivc

- ❖ abscess in the posterior triangle of neck. Post-surgery cant comb her hair. Lesion is in---->spinal accessory nerve
- ❖ Anemia in crf lesion of----->peritubular capillaries
- ❖ Female c/o elevated lesion on vulva. Biopsy pre malignant lesion. Diagnosis----->paget disease
- ❖ Urinary bladder----->sympathetic and parasympathetic supply
- ❖ Memory center is located in which part of the brain----->temporal lobe
- ❖ First structure to be traumatized under rib when passing chest drain----->intercostal nerve
- ❖ Apex of heart location----->5th intercostal space 8 cm lateral to left sternal border
- ❖ Most common physiologic cause of hypoxemia is----->ventilation-perfusion inequality
- ❖ Dystrophic calcification commonly occurs in----->necrotic tissue
- ❖ Amoebic liver abscess investigation----->serology
- ❖ Reticular connective tissue present in----->dermis
- ❖ Type of glasses should workers wear to avoid dark adaptation ----->red
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ 12 days after thyroidectomy had done, patient c/o spasm. Diagnosis----->hypocalcemic tetany
- ❖ Female pelvis tilted on vertebral column----->forwards
- ❖ Central retinal artery-----> emerges from optic disc within the optic nerve
- ❖ Retinoblastoma worst prognostic feature-----> optic nerve involvement
- ❖ iga anti-human tissue transglutaminase and iga antibodies positive. diagnosis----->celiac
- ❖ Pancreatic magna artery is a branch of----->pancreaticoduodenal
- ❖ Decrease blood flow to liver by----->halothane
- ❖ Incidence of pre-eclampsia. The most significant change in the fall of the disease is due to-----> unanimous definition of the disease
- ❖ Moa of local anesthetic is----->block na+ channel
- ❖ Treatment of anemia after total gastrectomy is----->iv vit b12
- ❖ A strong analgesic but a weak anaesthetic----->nitric oxide
- ❖ Superior pancreaticoduodenal artery is branch of----->gastrooduodenal artery
- ❖ Cancer of organ metastasizes to choroid ----->lungs
- ❖ Patient has near point 12.5cm. Range of accommodation is 5d. Spherical error ----->-3d
- ❖ Test for definitive diagnosis of tb is----->demonstration of afb

- ❖ Organelle can actively replicate----->mitochondria
- ❖ A test which completely excludes non*affected person is----->prevalence
- ❖ Final common motor pathway----->alpha efferent of spinal motor neuron
- ❖ Condition show normal mcv----->blood loss 2 days before
- ❖ Nuclei of rods and cones are present in which layer of retina-----> 4th layer
- ❖ Thyroid gland is enclosed by fascia----->pretracheal fascia
- ❖ Structure passes through foramen rotundum----->maxillary nerve
- ❖ A ketone body----->acetoacetate
- ❖ Cornea get oxygen directly from----->atmosphere
- ❖ Diet rich in vitamins----->green vegetables
- ❖ Relation of third ventricle----->posteriorly related to subthalamus
- ❖ Primary movement of atlantoaxial joints----->rotation
- ❖ Anterior dislocation of shoulder joint causes injury to which structure----->axillary artery
- ❖ Virus causes cancer by alteration in----->proto-oncogene
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Tubular structure having transitional epithelium and connective tissue with 3 layers of muscle and adventitia----->ureter
- ❖ Largest total cross-sectional area is of----->capillaries
- ❖ Increase in lymphocytes production and turnover is regulated by----->zona fasciculata
- ❖ Lady comes with vaginal bleeding after abortion . She has premalignant condition on histology. Diagnosis----->atypical endometrial hyperplasia
- ❖ Axillary nerve is most commonly damage in----->shoulder joint dislocation
- ❖ Most important factor in virchow triad----->endothelial damage
- ❖ Steep curve in dose response shows----->potency
- ❖ Abnormal metabolism of which amino acid results in formation of stone as an end product----->lysine
- ❖ Autoregulation of kidney is done by----->myogenic and tubuloglomerular feedback system
- ❖ Patient with intentional tremor, lesion in-----> cerebellum
- ❖ Aneurysm of the loweresophageal most likely involveswhich part of the heart----->left atrium
- ❖ Posterior descending artery supplies----->
- ❖ Breast----->15-20 lactiferous ducts

- ❖ Patient with pallor, body aches. Hb 6.1, mcv 11, and mchc 26. Cause----->iron deficiency anemia
- ❖ Pregnant lady with hyperemesis scenerio of alkalosis electrolyte abnormality occur-->hypokalemia
- ❖ Genital tubercle in females, forms which part----->clitoris
- ❖ Value for metabolic alkalosis-----> $\text{hco}_3 > 24$
- ❖ Relation with pharmaceutical companies -----> such that you can work towards the welfare of your institute.
- ❖ Oocyte released during ovulation is called----->secondary oocyte
- ❖ Most common radiation related brain tumor is----->meningioma
- ❖ Greatest blood flow per 100 grams to which organ----->kidney
- ❖ Part of a spinal nerve that supplies the true back muscles and the skin overlying them is----->dorsal primary ramus
- ❖ Best single test for hyperthyroidism----->tsh
- ❖ Patient. Had accident, bp less than 60. Which effect is most pronounced----->cns ischemic response
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Great vein of galen----->cistern of ambien
- ❖ Presence of delta antigen (hdv) shows----->chronicity
- ❖ Superficial fascia is made up of----->loose areolar tissue and adipose tissue
- ❖ Most common muscular ~dystrophy----->duchenne x linked recessive
- ❖ Absent bar bodies present in ----->turner syndrome
- ❖ Enzyme only metabolizing norepinephrine----->dopamine beta-hydroxylase
- ❖ First line of defense against microbial agents----->skin
- ❖ Structure related anterior to hilum of rt. Kidney----->second part of duodenum
- ❖ Tumor is least likely to metastasize ----->basal cell carcinoma
- ❖ Nephroblastoma ----->hyaloid artery
- ❖ Levels of which hormonere mains normal during pregnancy----->growth hormone
- ❖ Sesamoid bone is----->patella
- ❖ Types of drugs will have maximum oral bioavailability----->largely hydrophobic, yet soluble in aqueous solutions
- ❖ Mean weight of prostate in adult----->12 gm
- ❖ Dysplasia is mainly seen in----->epithelium
- ❖ After ml, free radicals are produced in reperfusion injury by which cells----->neutrophils

- ❖ Bulbar conjunctiva which is true-----> epithelium is stratified columnar epithelium
- ❖ Boy presents with periorbital edema. Mechanism of edema is----->hypoalbuminemia with salt retention
- ❖ A large tumour in the posterior mediastinum compresses structures----->descending thoracic aorta
- ❖ Venous drainage of heart-----> coronary sinus
- ❖ Acrosome are formed by----->golgi body
- ❖ Best pelvis for delivery----->subpubic angle > 90
- ❖ Pericardiocentesis is best achieved by passing a needle through----->
- ❖ True fat embolism is----->symptoms appear after 12 hours
- ❖ Highest proportion of which buffer is present in plasma----->hco3
- ❖ Most radiosensitive tumor is----->lymph node
- ❖ Hormone responsible for development of internal genitalis in males is----->testosterone
- ❖ Supporting cells of pars nervosa are----->herring bodies
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ Female hypertension weight gain why is cushings syndrome rather simple obesity -->abdominal striae
- ❖ Blunt trauma, decreased vision with dilated pupils, hazy cornea, cause of the pupillary defect----->trauma to sphincter papillae
- ❖ In pregnancy initially hb 12 then become 10. Type of this anemia in pregnancy is----->physiological
- ❖ Primary prevention of caries----->proper brushing technique
- ❖ Multifactorial ----->prolactinoma
- ❖ Prostatic cancer metastasize to----->vertebrae
- ❖ Specific marker of mi is ----->troponin
- ❖ Posterior branch that arises from aortic bifurcation----->median sacral artery
- ❖ Patient with pallor and weakness. O/e low mcv, taste changes and eggs in stool. Diagnosis----->ancylostoma duodenale
- ❖ Middle meningeal artery is a branch of----->maxillary artery
- ❖ Type of lymphoma associated with ebv is----->burkitt lymphoma
- ❖ Trans pyloric plane----->origin of sma at l1
- ❖ testicular swelling.labs show increased ldh. Diagnosis----->testicular lymphoma / seminoma
- ❖ Pathophysiology of blockage of lymphatics----->inc interstitium protein

- ❖ Germ cell arise in yolk sac at 3rd week of intrauterine life. They originate from ----->ectoderm
- ❖ Signs and symptoms of food poisoning due to clostridium botulinum is----->flaccid paralysis of respiratory muscles
- ❖ Cells of islets of langerhans are most abundant in which part of pancreas----->tail
- ❖ Uveal melanoma metastasizes to site ----->liver
- ❖ Lining epithelium of vagina is----->non keratinized stratified squamous epithelium
- ❖ Buffer acts in dka----->bicarbonate
- ❖ Prevents the lungs from being collapsed----->residual volume
- ❖ Prostate drains mainly into ----->internal iliac nodes
- ❖ Parents brought their child with edema and pigmentation. Likely diagnosis----->kwashiorkor
- ❖ Dead space remains unchanged----->shallow breathing
- ❖ sepsis not responding to iv fluids, this type of shock is usually not responsive to----->vasoactive agents
- ❖ Pellagra is caused by deficiency of which vitamin----->niacin
- ❖ Anterior dislocation of shoulder joint causes injury to structure----->post circumflex humoral artery
- ❖ Smooth muscles----->has layers of circular and longitudinal muscle
- ❖ Main support of pelvic viscera is----->levator ani
- ❖ Function exclusive to liver----->urea production
- ❖ On staining, cytokeratin indicates----->carcinoma
- ❖ Most common skin tumor associated with hiv is----->kaposi sarcoma
- ❖ Pain in the epigastric region, posterior thoracic wall and right shoulder after a fatty meal. Pain is originating from----->gall bladder
- ❖ Independent p wave and qrs complex shows-----> av conduction blocked
- ❖ In stage 4 ca cervix, which group of lymph nodes are involved----->internal iliac
- ❖ Patient underwent surgery for mitral valve replacement after 8-12 months presented with cola color urine cause----->microangiopathic hemolytic anemia
- ❖ Lymph flow decreased by increase of----->hemorrhage
- ❖ Bronchial arteries emerge from descending aorta at level of----->t5-t6
- ❖ Medial lemniscus is formed by decussation of----->internal arcuate fibers

In bitemporal hemianopia blockage will be seen in----->middle part of optic chiasm

 - ❖ Hiv with some tumor-----> kaposi sarcoma
 - ❖ Most likely cause of pernicious anemia is----->autoimmune atrophic gastritis
 - ❖ Nerve supply of ant. Abd wall----->t7-l1
 - ❖ Organism which is mostly present in surgery of abdomen and urogenital tract surgery----->bacteroides fragilis
 - ❖ Mg admitted with labor pains. O/e he os is 6 cm dilated,baby cephalic head at zerostation. Point of reference ----->ischial spine
 - ❖ Most common site of a gram negative organism causing infection leading to septic shock is----->urinary tract
 - ❖ Structure lies in the base of sub occipital triangle----->vertebral artery
 - ❖ Lesion in which area of the brain causes resting tremors and ■ expressionless face----->substantia nigra
 - ❖ Feature of a well differentiated squamous cell carcinoma are----->epithelial nest of keratin pearls
 - ❖ Prolactinoma----->prolactinoma
 - ❖ Lacunar ligament is medial rolled up part of----->reflected inguinal ligament
- Earliest observable sign irreversible cell change in ml is----->contraction bands in Cram
- Statements Inshallah 70 % paper will come from this file. DO not skip this file...
- ❖ cytoplasm
 - ❖ In certain pathologies, crescents in glomeruli are formed by----->parietal cells
 - ❖ Terminal part of cbd in relation to pancreas is that it----->lies posteriorly
 - ❖ At wrist joint, which bone articulates with radius----->scaphoid
 - ❖ Type of collagen which gives strength in wound healing is----->type 1
 - ❖ Nasopharyngeal carcinoma-----> ebv
 - ❖ An accessory cervical rib arising from transverse process of cervical vertebrae may cause damage to----->t1
 - ❖ Choroid-----> bruchs membrane separates the choroid from the retina
 - ❖ The axillary sheath is a continuation of----->prevertebral fascia
 - ❖ A primigravida in labor is not delivering baby per vaginal.o/e prominent ischial spines, narrow subpubic angle but the finger could not reach sacral promontory. What is type of pelvis is it----->android pelvis
 - ❖ Blood supply of epicardium is by----->coronary arteries
 - ❖ Porphyrin binds to----->albumin
 - ❖ Period btw remission and reoccurrence of disease is known as----->latent period

hip fracture in a rta presented with stands on his left leg his right hip sinks down. **Cram Statem Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file... ents Inshllah 70 % paper will come from this file. DO not skip this file...**

- ❖ Lesion ----->left gluteus minimums paralysis
- ❖ dead hydrocephalus fetus at -2 station, where insert needle to drain csf----->posterior fontanelle
- ❖ Fracture of neck of femur occurred. Delayed complication----->avascular necrosis
- ❖ Haploid number of chromosome with haploid dna are seen in----->spermatids
- ❖ Patient with juvenile diabetes mellitus, type of cataract is present ----->snowflake cataract
- ❖ Lateral relation of lower portion of vagina----->urogenital diaphragm
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ The esophagus passes through esophageal opening with----->vagus nerve and esophageal vessels
- ❖ Premalignant lesion of vulva is----->paget
- ❖ The type of hypersensitivity reaction that occurs in graves disease is----->type 2
- ❖ Will show characteristics of upper motor neuron lesion h cortex----->hyperreflexia
- ❖ Lady with type ii dm she is at risk of developing a pathology in-----> retina
- ❖ In pregnancy presents with bp 160/110. Drug----->alpha methyldopa
- ❖ Fever and right iliac fossa pain diagnosed as appendicitis. The systemic signs are----->bradykinin and prostaglandin
- ❖ Raynauds phenomena are seen in----->peripheral vascular disease
- ❖ Gfr increased by decreasing-----> plasma colloid osmotic pressure
- ❖ Patient had meningitis and treated, now came with morning headache ----->hydrocephalus
- ❖ Low doses of aspirin reduce platelet aggregation and clot formation due to----->thromboxane a2
- ❖ Plasma osmolarity is decreased by----->vasopressin
- ❖ Blood supply to uterus----->uterine and ovarian artery
- ❖ Anomic aphasia occurs due to lesion in----->angular gyrus
- ❖ Specific in iron deficiency anemia----->dec ferritin
- ❖ Intrinsic factor is secreted from which part of git----->fundus
- ❖ Tubular re-absorption of glucose and amino acids in which part of nephrons----->pct
- ❖ Amoeba commonly resides in----->cecum

- ❖ Patient with epiphora, jones i and jones ii test negative, what you do next----->probing

48 years old lady presented with amenorhea for 8 months. Reason for menopause---- **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**

- ❖ ->fsh, lh increased
- ❖ Removal of carbohydrates bound to serum protein result in----->aggregation and precipitation becomes antigenic
- ❖ Meissner corpuscles senses----->low frequency vibration
- ❖ Viral disease, cell line increased----->lymphocytes
- ❖ Patient pelvic pain, with nodule on fallopian tube. Diagnosis----->endometriosis
- ❖ Anterior hypothalamus function----->body temperature
- ❖ Study showing $p < 0.001$ ----->>null hypothesis rejected
- ❖ Newborn with translucent swelling, anterior abdominal wall & umbilicus attach to its apex----->omphalocele
- ❖ Derivative of 3rd pharyngeal pouch----->stylopharygeus
- ❖ Loss of inversion of foot occurs due to which muscle damage----->hallucis longustibialis anterior and tibialis posterior
- ❖ Most common median cranial anomaly----->median cleft lip
- ❖ Doc to treat endometriosis is----->danazol
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ Hypothyroidism due to thyroid gland disease is associated with increased level of----->cholesterol
- ❖ Patient cant oppose thumb and littlefinger. Nerve damaged----->median nerve
- ❖ Insulin increases the entry of glucose into----->skeletal muscle
- ❖ Major lipoprotein source of the cholesterol used in cells is----->ldl
- ❖ First step in csf formation----->ultrafiltration of na
- ❖ Step is common in both glycolysis and gluconeogenesis----->hexokinase
- ❖ Structure crosses the pelvic brim at the bifurcation of common iliac artery anteriorly--> ureter
- ❖ Micturition reflex controlled by----->sympathetic
- ❖ Decreases arterial O2 saturation without decreasing arterial O2 tension----->decrease atmospheric oxygen
- ❖ , amenorrhea normal appearance and secondary sexual characteristics. Absent ovaries and uterus. Cause----->testicular feminization syndrome
- ❖ During exercise, occurs----->increase stroke volume

- ❖ Parasympathetic nerves supplying the urinary bladder are---->pelvic splanchnic nerves
 - ❖ Brachiocephalic vein is formed by---->subclavian and internal jugular vein
 - ❖ 41 % of hematocrit means---->41 % of formed elements in blood are rbc
 - ❖ Posterior part of posterior limb of internal capsule related to----> optic radiation
 - ❖ A virus which is transmitted by mosquito---->dengue
 - ❖ Fibrocartilage---->abundant collagen
 - ❖ In pregnancy, which of the following occurs---->decrease total lung capacity
 - ❖ Patient presented with a stab injury losing almost 1.5l of blood. The most immediate finding---->decrease bp
 - ❖ Is a derivative of 3rd pharyngeal pouch---->stylopharyngeus muscle
 - ❖ Main action of gut somatostatin is to mainly inhibit---->insulin
 - ❖ Spinal cord termination in childrens at level of---->L3
 - ❖ Patient with edema which test you perform ---->24-hour urinary protein level
 - ❖ Deep vein thrombosis first gets lodged in---->pulmonary artery and branches
 - ❖ Type of necrosis seen in acute pancreatitis---->fat necrosis
 - ❖ Sympathetic receptor is responsible for production of thick saliva in female ---->alpha 1
 - ❖ Headache hypertension hyperglycemia. Could be due to---->catecholamines
 - ❖ Lymphatic drainage of glans penis and corpora is---->deep inguinal
 - ❖ During voluntary muscle contraction---->both alpha and gamma motor neuron in descending pathway are excited
 - ❖ A patient presented with right sided hemiplegia without any sensory loss. Lesion is in---->internal capsule
 - ❖ Correct pairing of reflex---->biceps - c5, c6
 - ❖ Most appropriate site for thoracentesis---->lower border of 9th intercostal space in mid axillary line
 - ❖ Cornea dry, nerve damage is----> greater petrosal nerve
 - ❖ With blockage of right superior bronchus due to mass, which bronchopulmonary segment is likely to collapse---->right apical superior
- red blood in her stool. Mucocutaneous pigmentation. Diagnosis---->peutz-jeghers Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...

- ❖ After liver biopsy there is severe pain on the tip of the right shoulder. Pain by nerves----->right phrenic
- ❖ After rta there is a hematoma compressing post central gyrus. Which area is most affected----->sensory area
- ❖ A person with type-a personality. Most probably have----->social stress/ social withdraw
- ❖ Effect of pilocarpine on sphincter pupillae is analogous to effect drug on dilator pupillae ----->epinephrine
- ❖ Hypersplenism----->platelet count returns to normal after splenectomy
- ❖ Man has carcinoma prostate, spread of tumor above vertebrae probably ----->internal vertebral plexus of veins
- ❖ Artery has branches that are end arteries----->central retinal artery
- ❖ During lp after crossing I3, I4 intra laminar space the needle touches which structure first----->epidural space
- ❖ Grading of a tumor shows----->nuclear differentiation
- ❖ In gap wound layer not properly stitched----->loose areolar tissue
- ❖ After delivery, the regression of enlarged uterus due to ----->lysosome
- ❖ Lipoprotein contains high amount of protein----->hdl
- ❖ Preganglionic supply of suprarenal adrenal gland is by----->greater thoracic splanchnic nerve
- ❖ Nerve supply to adrenal medulla is from----->preganglionic greater splanchnic nerve
- ❖ Anti-hcv positive on investigation, while donating blood with no signs. Best approach----->repeat anti-hcv
- ❖ Sympathetic cholinergic stimulation causes----->vasodilation in skeletal muscle
- ❖ Drug absorbed through aqueous diffusion----->diazepam
- ❖ Skeletal muscle----->belly is fleshy throughout length
- ❖ Taking immunosuppressive drugs. With high grade fever, neck rigidity. Csf studies organisms with a halo around it organism is----->cryptococcus neoformans
- ❖ Common cause of delay wound healing----->infection
- ❖ The best indexes of the preload on the heart is----->left ventricular end diastolic volume
- ❖ Following ribs are known as floating ribs. ----->1st & 2nd rib.
- ❖ increased renin secretion will cause----->angiotensin 2 induced vasoconstriction
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**

- ❖ Drug is given in myasthenia gravis to decrease ach degradation in neurosynaptic junction---->neostigmine
- ❖ The structure present between two z lines is---->sarcomere
- ❖ Furuncle on tip of nose, presented with swollen eyes diagnosis----->cavernous sinus thrombosis
- ❖ Levels of which hormone remains normal during pregnancy----->growth hormone
- ❖ Passive immunization by----->injecting t lymphocytes
- ❖ In urosepsis tests perform ----> urine and blood culture
- ❖ Is hood tumor with gene amplification----->neuroblastoma
- ❖ Structures in the kidney is responsible for sensing inadequate perfusion and secreting renin----->juxtaglomerular cells
- ❖ Lies posterior to cerebral aqueduct in midbrain----->tectum
- ❖ Muscle which increases the transverse and anteroposterior diameter of thorax is----->external intercostal
- ❖ An hiv positive patient asks if his disease will progress. Test useful----->cd4 lymphocyte count
- ❖ Common features of normal kidney----->podocytes in visceral layer of bowman capsule
- ❖ loss of skin sensation on lateral side of arm----->axillary nerve
- ❖ Tumor of infancy----->nephroblastoma
- ❖ Patient with hypothyroidism, on thyroxine for about 1 years, which test you perform now----->tsh
- ❖ Gas gangrene is caused by organism----->clostridium welchii
- ❖ Deep fascia of parotid forms which ligament----->deep fascia of parotid forms which ligament
- ❖ Drugs known to physician classed as a and b, given to patients. Randomly, is----->double blind
- ❖ Nerve supply to adrenal medulla is from----->preganglionic greater splanchnic nerve
- ❖ Safe analgesic dose of no~----->100ppm
- ❖ Injury in the region of anatomical snuff box resulted in severe bleeding due to injury of----->radial artery
- ❖ Hyaline cartilage is present in----->larynx

Transposition of great vessels, which is true----->aorta is in connection with right Cram

- ❖ Clotting factor deficiency that causes coagulation rather than bleeding ----->factor 5
- ❖ Significantly raised afp is characteristic of----->hepatocellular ca
- ❖ After chemotherapy, the tumor size regresses by----->apoptosis
- ❖ Main role is maintenance of eye power is by----->anterior surface of cornea
- ❖ To differentiate between type of jaundice, tests is most appropriate ----->alkaline phosphatase
- ❖ Virus associated with nasopharyngeal ca is----->ebv
- ❖ Drugs known to physician classed as a and b given to patients. Randomly, is----->double blind
- ❖ Oxidative burst in neutrophils is related to----->initiation of microbicidal killing
- ❖ Cornea which is more likely-----> central corneal thickness is about 565 to 580 microns
- ❖ Substance is neither absorbed nor secreted by the renal tubules----->inulin
- ❖ Rational drug design-----> insulin
- ❖ Artery is likely to be damaged in close proximity of phrenic nerve----->pericardiophrenic artery
- ❖ Corpus callosum injury----->loss of connections between two hemispheres
- ❖ Brachiocephalic vein is formed by----->int jugular and subclavian
- ❖ How inc in no. Of mitochondria occurs----->self-replication
- ❖ Anti d antibody is clinically important because----->causes hemolytic disease
- ❖ Growth factors at cell bring about its effects by working on receptors located at----->cell membrane
- ❖ Insoluble storage form of iron in iron overload----->hemosiderin
- ❖ Cardiogenic shock is a complication of----->mi
- ❖ Lymph from the fundus of stomach will drain into which node----->celiac nodes
- ❖ Right leg pain, tract involved----->left lateral spinothalamic tract
- ❖ Subarachnoid space ends at the level of----->s2-s3
- ❖ Down and fractures his medial epicondyle of humerus resulting in damage to ulnar nerve. Sensation affected----->distal and palmar aspect of medial 1 /3rd of hand
- ❖ Mixed venous blood sample can be obtained from----->pulmonary arteries
- ❖ A neonate with projectile non-bilious vomiting. Shows a mass in the abdomen. Diagnosis----->hypertrophic pyloric stenosis
- ❖ Stratified cuboidal epithelium are present in in----->lining duct of salivary gland
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**

- ❖ Most likely cause of a negative mantoux test in a tb would be due to---->immunosuppressive therapy
- ❖ Vomiting centre is located in---->medulla oblongata
- ❖ Most common lobe involved in prostate carcinoma is---->posterior
- ❖ testes undescended. At risk of ---->neoplasia
- ❖ Complete h. Mole---->46xx
- ❖ Retinoblastoma & tumor of the lower limb which malignancy it can be---->osteogenic sarcoma
- ❖ Klinefelter syndrome karyotype---->47 xxy
- ❖ Main supply of head of humerus is from---->arcuate artery
- ❖ Azospermia. Cause ---->sertoli cell
- ❖ Cotton wool spots are present in ---->diabetic retinopathy
- ❖ Feature of upper motor neuron lesion is---->exaggerated reflexes
- ❖ Similarity between cardiac and skeletal muscle is---->transverse striations
- ❖ Patient with deep knife wound in the buttock with a waddling gait characterized by the pelvis falling toward one side at each step. Nerves damaged---->superior gluteal nerve
- ❖ Ovarian artery is a branch of---->abdominal aorta
- ❖ Patient with gastroenteritis, potassium is advised. Moa of iv potassium ---->na-k pump
- ❖ Lesion of lateral hypothalamus results in---->inhibition of feeding
- ❖ Metaplasia---->one epithelial changes into another normal epithelium
- ❖ Use of oxytocin in obstetrics is---->to augment uterine contraction
- ❖ Adverse effect of drug, which is correct---->variable
- ❖ Lateral inhibition in retina done by----> horizontal cells
- ❖ Oxygen delivery to tissue is decreased by---->co poisoning
- ❖ In hydrocephalus, most common obstruction occurs at---->aqueduct of sylvias
- ❖ Most abundant glial cells in gray matter---->protoplasmic astrocyte
- ❖ In retrolental fibroplasia, neovascularization occurs at sites ---->peripheral retina
- ❖ Lymphatic drainage of breast divided into---->medial lateral
- ❖ Site for thoraco centesis---->lower border of 9th intercostal space in mid axillary line
- ❖ New bom which is true---->c shaped vertebral column
- ❖ Positive predictive value is---->proportion of true positive in all positive

- ❖ Segregated pts on basis of presence or absence of vomiting. What type of data it is----->nominal
- ❖ Major tumor marker for ca colon is----->cea
- ❖ The loss of water by evaporation and insensible loss from body----->depends on core body temperature
- ❖ Tears contain more than plasma----->potassium
- ❖ Leukocoria in infant diagnosed with phpv is because of----->hyperplastic pupillary membrane
- ❖ Right renal vein drain into----->ivc
- ❖ Vitreous main content----->water
- ❖ The structure most likely to be affected by pus in the adductor canal is----->femoral vein
- ❖ Baby a sac like defect in the lumbosacral region with neural tissue in it, diagnosis----->myelomeningocele
- ❖ Motility of sperms begin at----->epididymis
- ❖ Skin pigmentation, tingling sensation and loss of balance. MCV 120----->megaloblastic anemia
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ Foramen Monro-----> connects lateral and 3rd ventricle
- ❖ Dysplasia is mainly seen in----->epithelium
- ❖ Main pillar of medial longitudinal arch of foot is ----->talus
- ❖ First test that should be performed in a patient with lower GI bleeding----->colonoscopy
- ❖ Dicrotic notch is seen in----->aortic closure
- ❖ Man with long standing HTN and aortic stenosis. The histology of his heart will show--->hypertrophy of ventricular cells
- ❖ Marker used to measure total body water ----->heavy water
- ❖ Drug receptors----->protein in nature
- ❖ Safe area for paracentesis ----->lower part of 9th intercostal space midaxillary line
- ❖ A mother with blood group "O" has a baby with "AB". Test can be done to confirm that the baby is theirs----->pheno-bombay typing
- ❖ Stylopharyngeus -----> venous compliance
- ❖ Patient known type II diabetic with loss of visual acuity had some laser treatment. Changes in----->macula
- ❖ Ossification of the sternum body occurs at the age of----->21 years

- ❖ Type of omental necrosis is---->fat
- ❖ Radiation damage cell by free radicals which act on---->dna
- ❖ Characteristic feature of c2 vertebrae---->odontoid process
- ❖ Is an example of a neuro- hypophysial hormone---->oxytocin
- ❖ Bronchogenic carcinoma is caused by which virus---->cmv
- ❖ A strong analgesic but a weak anesthetic---->nitric oxide
- ❖ Important dead space---->conditioning of inhaled air
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ drug distribution in a 70kg man is 8 liters. This means ---->equally distributed in ecf
- ❖ Dermatome present on lateral side of the foot is---->s1
- ❖ Normal amount of iron in adult female is---->3g
- ❖ Receptor abundant on tip of finger---->meissner
- ❖ Drain in jugulo-diagastric lymph nodes ---->palatine tonsil
- ❖ Urine coming out of umbilicus ---->patent urachus
- ❖ Secondary bone ossification center in adult is present in---->epiphysis
- ❖ A trained athlete at rest has increased---->stroke volume
- ❖ Sychondrosis most appropriate---->in between the joining bone there is plate of hyaline cartilage
- ❖ In weight loss, most imp a person can do by himself.---->self-monitoring
- ❖ True about normal adult hemoglobincontains---->
- ❖ Ground substance offibrocartilage has abundant of---->
- ❖ Insulin increase the entry of glucose into---->skeletal muscle
- ❖ Most common cause of subacute endocarditis is---->staph viridans
- ❖ Intermediate filament is present in most carcinoma---->keratin
- ❖ Post-op wound causes greenish pus discharge. Which organism is involved---->staph aures
- ❖ New vessel proliferation is done bywhich of these substance from macrophages---->pdgf
- ❖ Superficial inguinal ring is a defect---->external oblique
- ❖ A tumor suppressor gene---->p53
- ❖ Pap smear of an 18-year girl shows mild dysplasia in cervix. Which grade is it---->cin 1
- ❖ Superficial inguinal ring is a defect in---->external oblique

- ❖ A primary oocyte surrounded by zona pellucida and corona radiata with fluid filled spaces is called----->secondary oocyte
- ❖ Students develop loss of appetite yellow discoloration of the eyes. Virus responsible - ---->hep a
- ❖ In testicular tumor lymphatic drainage will into----->retro peritoneal node
- ❖ Following hypophyseal structure receive secretions through hypophyseal portal system----->adenohypophysis
- ❖ Maximum flow pressure in coronary vessel occurs at----->beginning of diastole
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ A functional remnant of mesonephric duct in males----->seminal vesicle
- ❖ Bromocriptine causes----->decrease prolactin release from pituitary
- ❖ Biological substances present in food----->nutrients
- ❖ Painless gradual protrusion of right eye with normal x ray orbit cause is----->optic glioma
- ❖ Common cause of mutation of proto-oncogene is----->virus
- ❖ A carcinoma of vagina below hymen spread into lymphatics into----->medial group of horizontal superficial inguinal nodes
- ❖ Action of cholecystikin hormone----->delayed gastric emptying
- ❖ Female patient had endocervical polyp with squamous epithelium on biopsy. It shows----->metaplasia
- ❖ Parasympathetic stimulation causes----->opens intestinal sphincters
- ❖ Diagnosis of typhoid in 1st week is done by----->blood c/s
- ❖ bicep tendon reflex is absent . Compression occur----->c5-c6
- ❖ One and only main feature for diagnosis of malignancy----->pleomorphism
- ❖ Most important factor for the repair of vascular endothelium is produced by ----->platelets
- ❖ Cell swell maximally.swell when placed in----->250 mm urea
- ❖ In testicular tumor lymphatic drainage will into----->retro peritoneal node
- ❖ Least maternal deaths seen in age range----->15-20 yrs.
- ❖ Drug of choice for bee sting, swollen face----->i/m adrenaline
- ❖ Most favorable pelvis for delivery----->gynecoid pelvis
- ❖ Neurons move from one place to other by----->neurons move from one place to other by
- ❖ Is the total lung capacity of an adult male----->6 liter
- ❖ Use of oxytocin in obstetrics is----->to augment uterine contraction for lactation

- ❖ Internal oblique muscle aponeurosis form ----->conjoint tendon
- ❖ Virus cause cancer by alteration in ----->Proto-oncogene
- ❖ Thiopental has 15 min duration due to----->rapid distribution
- ❖ Mother rh positive and father rh negative conceive a baby,----->no complications will occur
- ❖ Function of beta hcg----->preservation of corpus luteum
- ❖ All the short muscles of hand are supplied by----->t1
- ❖ Sign of clostridium botulinum is----->flaccid paralysis of respiratory muscles
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ In anterior inferior iliacspine fracture, pelvic avulsion is done by which muscle----->rectus femoris
- ❖ Sympathetic supply of lower airways is from----->t1-t2
- ❖ Most common congenital diseases----->multifactorial
- ❖ Pupillary membrane disappears at which month of fetal life ----->8th month
- ❖ Intention tremors occur due to lesion in----->cerebellum
- ❖ Main support of pelvic viscera is----->uterosacral ligament
- ❖ Stratified cuboidal epithelium is present in----->sweat duct
- ❖ Vagal stimulation alters the permeability of----->k
- ❖ Anti-cancer cells are----->nk cells
- ❖ Tall girl with mammary discharge, increased prolactin will show----->increase in eosinophil
- ❖ Anencephaly----->incomplete closure of cranial neuropore
- ❖ Secretory hormones from neurohypophysis are stored in----->pituicytes
- ❖ Patient with bitemporal hemianopia. Lesion at ----->center of optic chiasma
- ❖ mediators in inflammation----->tnf and interleukin 1
- ❖ Glucose absorbed completely from which segment----->pct
- ❖ Cushings syndrome feature----->abdominal striae
- ❖ Swelling anterior to sternocleidomastoid, superficial vein will it be most likely compressing----->external jugular
- ❖ Fine, intermittent nystagnus and no other ophthalmological or neurological signs. Lesion is most likely present in----->cerebellum
- ❖ Pain and temperature fibers are in----->lateral spinothalamic tract
- ❖ Cabergoline acts on ----->d2 agonist
- ❖ Right border of heart is made by----->right atrium
- ❖ High affinity for receptor----->free tri-iodothyronine

- ❖ Eeg waves in anesthetized patient----->decreased frequency
- ❖ Lymphatic drainage of labia majora is----->superficial inguinal nodes
- ❖ Common cause of fatty liver in our country is----->increase fatty food intake
- ❖ Effect of primary dehydration on ecf becomes----->hypertonic
- ❖ Temperature is controlled by----->anterior hypothalamus
- ❖ Gve nucleus of vagus nerve-----> dorsal motor nucleus
- ❖ A patient with known hbv infection comes with hbsag +ve, hbeag +ve, hbcab igm +ve. Diagnosis----->acute hepatitis
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Dopamine has inhibitory effects on----->prolactin
- ❖ Meissner corpuscles senses----->low frequency vibration
- ❖ Deficiency of which vitamin occurs in chronic pancreatitis----->vitd
- ❖ During pregnancy, hormone acts as a growth hormone ----->human chorionic somato mamotropin
- ❖ Patient has intractable long history of pain and taken various painkillers but of no use. Treat patient by---->psychological cognitive treatment
- ❖ Anterior boundary of lumbar triangle is formed by----->by posterior border of external oblique muscle.
- ❖ Last to be returned to normal after acute blood loss----->rbc in peripheral smear
- ❖ Hepatitis in pregnant women----->hep e
- ❖ Doctor patient relationship. What is most important----->mutual trust
- ❖ Blood supply of head of femur---->medial circumflex femoral artery
- ❖ Action of sternocleidomastoid muscle----> head tilting to opposite side against resistance .
- ❖ Sympathetic supply of lower airways is from----->t1-t2
- ❖ Macrophages are derived from----->monocytes
- ❖ Percussionposterior aspect of the chest along thescapular line in sitting position resonates most likely till which rib----->10th rib
- ❖ Virus associated with nasopharyngeal ca----->ebv
- ❖ Pulmonary varix opens into----->left atrium
- ❖ Type 2 diabetes patient has weakness and increased frequency of urine. What is the possible mechanism of polyuria----->decreased reabsorption of glucose in pct
- ❖ Posterior relation of head of pancreas is to----->ivc
- ❖ Root value of phrenic nerve with major contribution is by----->c4
- ❖ Non-invasive fungal sinusitis. Most common cause----->diabetes

- ❖ Gallbladder is mainly supplied by----->cystic artery
- ❖ Change in shape, size and polarity occurs in ----->dysplasia
- ❖ Erythropoietin is increased in----->high altitude
- ❖ Infundibulum supplied by----->right conus artery
- ❖ The massive accumulation of fluid in abdomen is the result of----->hypoalbuminemia
- ❖ Chlamydia is etiological agent for----->lymphogranuloma venerum
- ❖ Superior rectal artery is a branch of----->inferior mesenteric artery
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Most important test for prenatal diagnosis of congenital disease is----->chorionic villus sampling
- ❖ Patent lumen of allantois form----->urachal fistula
- ❖ There is greatest chance of pneumothorax formation while inserting cvp via which route----->right subclavian
- ❖ Similarity between hyperthyroidism and diabetes mellitus----->weight loss
- ❖ Peripheral smear shows large platelets diagnosis----->itp
- ❖ Endothelium in prevention of coagulation by---->prostacyclin (pgi2)
- ❖ Knife pierces intercostal space how many layers does it pierce before touching lung substance ----->8 layers
- ❖ Upper outer quadrant of the breast. Lymphatic drainage ----->pectoral axillary nodes
- ❖ Vaginal candidiasis drug----->imidazole derivative
- ❖ At 21-week placenta act as strict barrier----->syncytiotrophoblast, connective tissue, endothelium of fetal tissue
- ❖ Most potent inhibitor of insulin is----->somatostatin
- ❖ Living at 11000 feet height complains of fatigue what is the diagnosis----->respiratory alkalosis
- ❖ Muscle involved in opening of mouth----->lateral pterygoid
- ❖ Loss of taste in posterior aspect of tongue, difficulty in producing voice .foramen involved----->jugular foramen
- ❖ Resting membrane potential is maintained by----->na/k atps pump
- ❖ Land mark of mitral valve is----->5th intercostal midclavicular space
- ❖ Pregnant p3 can deliver vaginally if----->subpubic angle > 90
- ❖ Low dose heparin acts by----->inhibits activated factor 10
- ❖ Compact bone----->circumferential lamella form osteon
- ❖ First part of duodenum is posteriorly related to----->gastroduodenal artery

- ❖ Pancytopenia, 0.1% retie count and hypocellular bone marrow with normal cell morphology. ---->aplastic anemia
- ❖ At the end of a marathon race, the person will have ---->high glucagon and low insulin
- ❖ Pregnant female, her diet lacking green leafy vegetables, possible pathology in fetus-->anencephaly
- ❖ Thyroglobulin is synthesized by which cells---->follicular cells
- ❖ Bony landmark for pudendal nerve block is---->ischial spine
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Is the immediate effect of the body to lose heat---->cutaneous vasodilations
- ❖ External anal sphincter supplied by---->pudendal nerve
- ❖ Median umbilical ligament is aremnant of---->urachus
- ❖ First cry in neonates is necessary for---->pulmonary function
- ❖ Cannot see whats written on blackboard. Most likely condition he has ---->axial myopia
- ❖ Volatile acid compensation---->bicarbonate
- ❖ Nerve supply of rectus abdominis is---->last five intercostal and subcostal nerve
- ❖ Normal area of mitral valve is---->4-6 cm²
- ❖ Nerve supply to adrenal medulla is from---->preganglionic greater splanchnic nerve
- ❖ Pulsatile mass is abdomen is noted. Site of origin is---->t12-l2
- ❖ Cause of fatty liver in our country---->obesity
- ❖ A male presented with testicular mass with elevated AFP---->embryonic carcinoma
- ❖ A patient is called chronic carrier if he has hbsag---->for more than 6 month
- ❖ Patient has jaundice, pruritus and xanthoma---->anti-mitochondrial antibody
- ❖ Virus can cause malignancy---->htlv
- ❖ Microscopic diagnostic feature of tb lesion is---->caseous necrosis
- ❖ Upper 1/3"1 of vagina is derived from---->paramesonephric duct
- ❖ Right colicky lumbar pain within 48 hours. Structure likely damaged---->ureter
- ❖ Mca supplies blood to---->insula and opercula
- ❖ Hypoxic cell injury occurs due to---->co poisoning
- ❖ Diagnostic test for diabetic nephropathy is---->microalbuminuria
- ❖ Patient 40% burn. Cause of low- voltage of action potential---->hyponatremia
- ❖ hb 5.5, increase bilirubin, retie count 5%. Smear shows polychromasia and clumps. Test to confirm diagnosis---->coombs test
- ❖ Ischiopubic rami fuses at age---->7 years

 - ❖ Muscle responsible for rotation of scapula----->serratus anterior
 - ❖ If ovarian cycle duration is 21-23 days, when will the ovulation takes place----->7 to 9 days
 - ❖ Nerve supply to scrotum is from----->ilioinguinal
 - ❖ Main support of temporomandibular joint is----->temporomandibular ligament
 - ❖ Passive movement across membrane by carrier proteins----->passive active transport
- Biopsy of intestine show villous atrophy and gluten free diet doesn't improve his **Cram**
Statements Inshallah 70 % paper will come from this file. DO not skip this file...
- ❖ symptoms. Diagnosis----->giardiasis
 - ❖ Cerebellum is connected to midbrain via----->superior cerebellar peduncle
 - ❖ Stretch muscle will cause contraction of----->muscle which is stretched
 - ❖ Lymphatic drainage of anal canal (below pectinate line),----->superficial inguinal nodes
 - ❖ A person can walk but unable to stand from sitting position. The most likely muscle involved is----->gluteus maximus muscle
 - ❖ Take part in formation of pelvic diaphragm----->puborectalis
 - ❖ Structures may damage in free margin of lesser omentum----->portal vein, common bile duct and hepatic artery
 - ❖ B-cell lymphoma. Investigation is antibody test for----->EBV
 - ❖ Pleomorphism ----->thrombocytopenia
 - ❖ Lymph drainage from back of skin at level T10 vertebrae is by----->post axillary node
 - ❖ Urologist doing transurethral surgery. 2 arteries at 5 and 7 o'clock started bleeding and his way is blocked, name of those arteries----->Bardanach's arteries
 - ❖ Parotid duct opens at----->upper 2nd molar

- ❖ Bilateral bronchiectasis with thick sputum with eosinophils for 4 years. Cause is----->aspergillosis
- ❖ Right border of the heart is formed by----->right ventricle
- ❖ Case of htn and headache on lumbar puncture, the csf was blood stained. Likely cause----->subarachnoid hemorrhage
- ❖ Csf enters into subarachnoid space-----> arachnoid villi
- ❖ Carotid sinus----->responds to changing pressure .
- ❖ Is notparasympathetic----->tubal
- ❖ Parasympathetic supply of heart is via----->vagus nerve
- ❖ Clavipectoral fascia which vein is present----->cephalic
- ❖ Bone cells are related to bone remodeling----->osteoblast and osteoclast
- ❖ Biopsy of the distal esophagus is taken. Mucosa in distal esophagus----->non-keratinized, stratified, squamous epithelium
- ❖ For abg we use----->arterial whole blood in heparinized tube
- ❖ Absolute contraindication of propofol----->hypersensitivity reaction
- ❖ After strenuous exercise, subjective feeling of exhaustion occurs due to ----->lactic acid release and decreased ph
- ❖ **Cram Statements Inshlah 70 % paper will come from this file. DO not skip this file...**
- ❖ Amino acid source of dna----->histidine d alanine
- ❖ Gitelman syndrome is a defect in which part of kidney----->dct
- ❖ Most common adverse effect of diazepam used during labor is----->neonatal hypotonia
- ❖ Most difficult route of infection to control----->airborne
- ❖ 46xx with ambiguous genitalia.diagnosis----->congenital adrenal hyperplasia
- ❖ Alcoholic pt has non-healing marks on body which cell is defective ----->fibroblasts
- ❖ Spinal cord termination in adults at level of----->l1
- ❖ Most important cells of chronic inflammation----->lymphocytes
- ❖ With the internal carotid artery being blocked, the blood passes in reverse direction through an artery that supplies the scalp. ----->supra orbital
- ❖ Patient on total parenteral nutrition (tpn) is prone to develop ----->hyperglycemia
- ❖ Old women had rta. Right colicky lumbar pain within 48 hours. Structure damaged--->ureter
- ❖ In essential hypertension, atherosclerosis is due to----->hyaline
- ❖ Four pillar of medical ethics----->beneficence, justice and non-maleficence
- ❖ Characteristics sign of penicillin allergy is----->bronchospasm

- ❖ Biopsy above gastroesophageal junction columnar cells with goblet cells are seen. Diagnosis---->metaplasia
- ❖ Parasympathetic stimulation causes ----->increase small intestine peristalsis
- ❖ Present with greenish foul smelling vaginal discharge. On microscopy motile trophozoites are seen. Organism is responsible----->trichomonas vaginalis
- ❖ oval macrocytes hyper segmented neutrophils. Diagnosis is----->vit b12 deficiency
- ❖ Is the csf specific gravity----->1.005 to 1.009
- ❖ Syphillic gonorrhoeal cyst in the anterior two third of labium majors and minor. Cause----->greater vestibular glands
- ❖ Blood group with no agglutinins----->ab positive
- ❖ Sample in patient with syphilis is taken from-----> genital spores
- ❖ Structure which separates superficial and deep part of submandibular gland ----->mylohyoid
- ❖ Physiological form of dna in humans is mostly----->b form
- ❖ Bronchopulmonary segment----->aerated by tertiary bronchus
- ❖ Increased neural activity before a skilled voluntary movement is first seen in----->cortical association areas
- ❖ **Cram Statements Inshlah 70 % paper will come from this file. DO not skip this file...**
- ❖ Hormone which triggers onset of parturition in mother is ----->niemann pick
- ❖ Premature developed respiratory distress. Most likely finding of lung ----->decrease lamellar cells in type 2 pneumocytes
- ❖ Shows that the fluid from pleurisy is transudative----->lymphocytes less than 3
- ❖ Patient has rash and pruritis below clavicle and above sternal angle dermatome involved----->c3, c4
- ❖ Acetaminophen undergoes which metabolic process to appear in urine----->glucuronidation
- ❖ Lowest testosterone levels are present in----->preschool
- ❖ Mhc-1----->present on chromosome 6
- ❖ Non-contraceptive benefit of contraceptive pills is----->prevention of ovarian cancers
- ❖ Urography of man non contrast media in left lumbar region, dye excreted normal on right side and a little excretion of dye was seen just above side of bladder. Cause is--->pelvic kidney
- ❖ Difference between interstitial fluid and plasma osmolarity is----->1
- ❖ Platelets are transfused at room temperature----->to optimize their function

- ❖ Deranged alt ast bilirubin, and lipid droplets were seen in hepatocytes. Likely diagnosis---->chronic alcoholism
- ❖ Patient with dished-in face appearance, cleft palate, syndactyly, . Conditions is ---->alpert syndrome
- ❖ Cell causing hindrance to regeneration of cns----->oligodendrocytes
- ❖ heparin requires inhibitor ---->antithrombin3
- ❖ Mother milk is deficient in---->iron
- ❖ Par boiling paddy helps in storage of which vitamin---->b1
- ❖ Severe headache raised icp. Lp csf blood stained----->subarachnoid hemorrhage
- ❖ Collagen variety helps in strengthening of wound healing ---->type 1 collagen
- ❖ Muscle which helps in opening the eye ---->levator palpebrae superioris
- ❖ Intercostal space are arranged inwhich order----->vein, artery, nerve
- ❖ Anti-gonadotropin hormone released in dark is ---->melatonin
- ❖ Endolymph has greater concentration of which ion---->k
- ❖ Visceral pleura---->supplied by autonomic nervous system
- ❖ hemiplegia on left side, motor neuron lesion plus homonymous hemianopia. Lesion at---->forebrain
- ❖ **Cram Statements Inshallah 70 % paper will come from this file. DO not skip this file...**
- ❖ Hla b27 is associated with---->ankylosing spondylitis
- ❖ The feature of mild carbon monoxide poisoning is---->decrease ability of O2 to bind hemoglobin
- ❖ Specific dietary carcinogen for esophageal carcinoma is---->nitrosamine
- ❖ Lymphatic drainage of prostate---->internal iliac nodes
- ❖ Rpe and sensory retina are bound together because of---->gags
- ❖ Structures compressing esophagus are---->left atrium
- ❖ Patients risk for breast cancer---->brca-1 mutation
- ❖ splenomegaly with splinter hemorrhage. Investigation for diagnosis---->blood culture
- ❖ Urothelium in will have great chance to convert to carcinoma---->bilateral ureteral duplication
- ❖ Numerous cyst in kidney and liver. Pattern of inheritance of this disease is---->autosomal recessive
- ❖ Female with dragging sensation in abdomen. Best investigation ---->ca 125
- ❖ Ischemia of superior mesenteric artery involve---->duodenojejunal junction to 2/3rd of transverse colon

- ❖ Calcitonin is released in which malignancy----->thyroid
- ❖ Posterior relation of uncinatprocess of pancreas----->sma
- ❖ Internal environment remains static via----->negative feedback
- ❖ Diphtheria has following most likely feature----->exotoxin
- ❖ Ejaculation occurs due to----->pudental nerve
- ❖ Cervical dysplasia tests safe and is cost effective----->pap smear
- ❖ Nerve supplying the dura of middle cranial fossa----->trigeminal nerve
- ❖ Can a mother pass on only to her son if she is a carrier----->hemophilia
- ❖
- ❖ Group with smokers and lung carcinoma is compared to another group with smokers but no lung carcinoma. Type of study ----->case control
- ❖ Therapeutic and toxic side effect of loop diuretics is----->low blood volume
- ❖ Muscle that traverse shoulder joint capsule----->long head of biceps
- ❖ Most important reflex for defecation is ----->rectoanal
- ❖ Patient with urticaria was given im adrenaline blood samples show raised----->ige
- ❖ A post adrenalectomy patient. Dies 3 days after the surgery. Likely cause----->deficiency of aldosterone
- ❖ **Cram Statements Inshlah 70 % paper will come from this file. DO not skip this file...**
- ❖ Veins of brain are direct tributaries of----->dural sinuses
- ❖ Bulbourethral gland is a content of----->deep perineal pouch
- ❖ Mean arterial pressure is----->co x tpr
- ❖ Absent p waves on ecg occurs in----->nodal rhythm
- ❖ Bicomuate uterus is associated with pathology in----->kidney
- ❖ rh negative female marries a rh positive male who is homozygous, all children will be----->all positive
- ❖ Whip like movement of cilia occurs in----->fallopian tube
- ❖ Radial artery is palpated between the tendons of which two muscles----->flexor carpi radialis and brachioradialis
- ❖ married female secondary amenorrhea fsh and lh levels high, has premature ovarian failure. Most probable cause----->autoimmunity
- ❖ Atherosclerosis----->due to internal plaque
- ❖ Normal cerebral blood flow----->750ml/min
- ❖ Postmortem patient of chronic aortic stenosis will show----->hypertrophy
- ❖ Child with frontal bossing bow legs and chest deformity ----->vit d deficiency

- ❖ iliac artery
- ❖ Gas gangrene is caused by organism----->clostridium welchii
- ❖ Rigor mortis is due to----->calcium
- ❖ Movement of brain limited by----->falx cerebri
- ❖ Old girl obese, hirsutism, acne, fsh 122 and lh 40 inc testosterone inc estrogen diagnosis----->pcod
- ❖ rigors and chills, high grade fever and not responding to treatment diagnosis is----->acute pyelonephritis
- ❖ Dermatome below clavicle but above sternoclavicular joint----->c3-c4
- ❖ Alcoholic patient with meningitis, csf show inflammatory cells, organism involved is--->hsv
- ❖ Significantly raised afp is characteristic of----->hepatocellular ca
- ❖ One question was fuchs endothelial dystrophy (typical repeat)----->
- ❖ Structures compressing esophagus are----->left atrium
- ❖ Ribosomes rna major constituent of----->ribosomes
- ❖ Dermis -----> na channel is blocked
- ❖ Dietary precursor of serotonin is----->tryptophan
- ❖ Point to point discrete movement of a painter are controlled by----->corticospinal tract
- ❖ Saccadic eye movements-----> frontal eye field
- ❖ Patient develops dvt after laparotomy. Most likely cause is----->stasis + hypercoagulable state
- ❖ Pretectal nucleus is at the level of----->superior colliculus
- ❖ Eye damaged by burning develops corneal edema. Likely cause is ----->direct damage to corneal endothelium
- ❖ Free radicals are removed by----->transferrin
- ❖ Patient with easy fatigability, pallor, body aches. Labs show hb 6.5, mcv 21 and mchc 24. Cause----->iron deficiency anemia
- ❖ Is a neuroectoderm derivative----->ciliary epithelium
- ❖ Damage to first lumbar vertebra will lead to compression of----->conus medularis
- ❖ Mycobacterium doesn't produce exotoxin and endotoxin how it cause inflammation/Infection----->tuberculin

- ❖ diagnosis---->synovial fluid analysis
- ❖ Left half of pons is related to----->right cerebellar hemisphere & left basal ganglia
- ❖ Pectoral group of axillary nodes drain----->major part of breast
- ❖ A patient on att presented with elevated esr. Cause----->superimposed bacterial infection
- ❖ Absolute contraindication of propofol----->hypersensitivity reaction
- ❖ Cause of death in gas gangrene is---->toxemia
- ❖ Glucose cross through placenta via----->facilitated diffusion
- ❖ **Cram Statements Inshllah 70 % paper will come from this file. DO not skip this file...**
- ❖ Condition is related to lymphatics----->cystic hygroma
- ❖ Thermo receptantors----->long receptantive field
- ❖ Tumor suppressing gene ----->p53
- ❖ In a 70 years old man, accommodation power is ----->2d
- ❖ Patient has difficulty is shrugging his shoulders. Most likely the nerve damaged is----->accessory nerve
- ❖ External oblique fibers interdigitate with---->serratus interior
- ❖ Structure is closest to crus cerebri----->substantia nigra
- ❖ Trauma to the eyeball by a ball now presents with diplopia and restricted upward movement. Cause ----->blow out fracture
- ❖ Aqueous contains more than plasma----->ascorbate
- ❖ Inhibition of na k atpase in cardiac muscle----->inc intracellular calcium
- ❖ In which part of the kidney does 60- 80% of the filtered water gets reabsorbed within 24 hours----->pct
- ❖ Mechanism of action of propylthiouracil is----->blocks synthesis of thyroid
- ❖ gestational age 34week has a symphysio fundal height of 28 weeks. Likely cause ----->iugr
- ❖ After ovulation primordial follicle ruptantures, bleeds and becomes----->corpus hemorrhagicus
- ❖ Cilio-retinal artery, more appropriate ----->good prognosis in crao
